Background: Three things happening simultaneously

3D content as a regular part of Internet content

HTML5 + WebGL

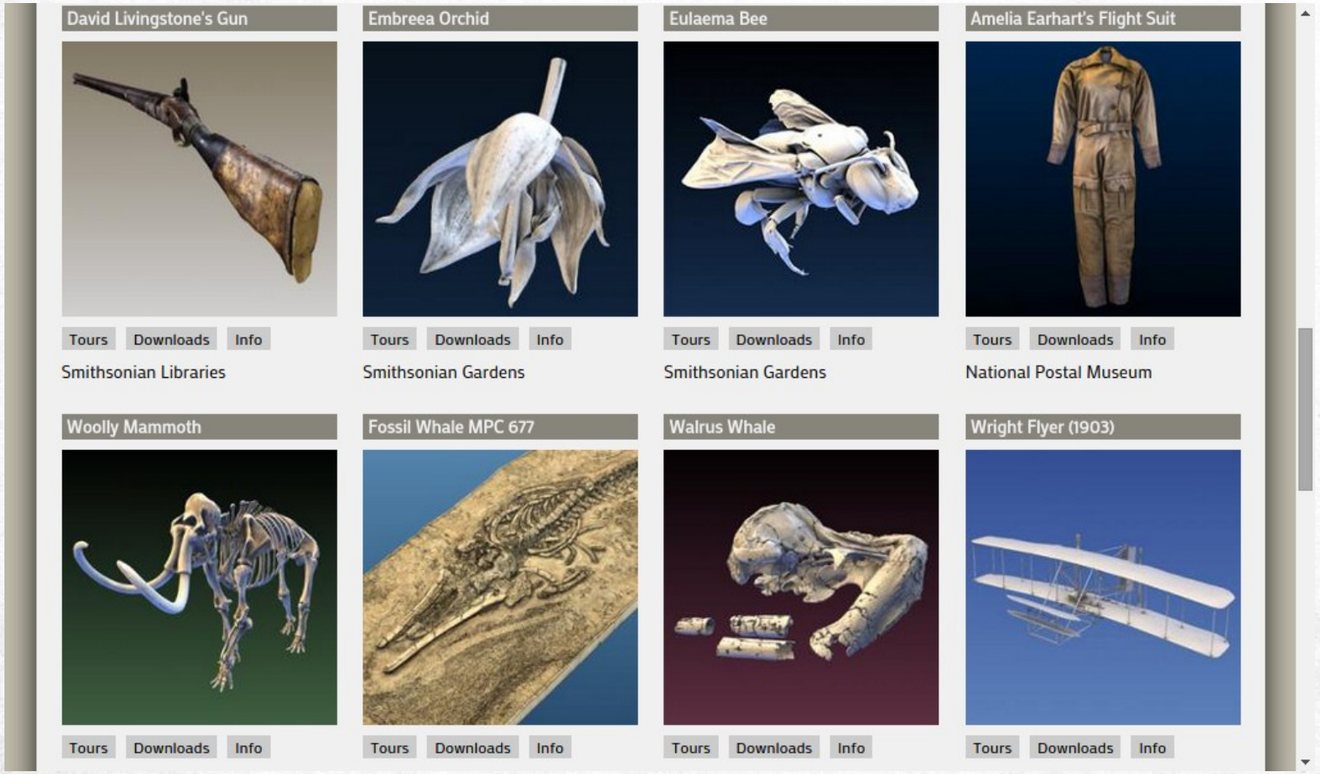

Photography and 3D modelling are mixed

3D capture

Rise of the mobile devices

small touch screens, little power

Online 3D content?

Smithsonian Institute

Do we need online 3D in cultural heritage?

we need 3D models since they provide three dimensional view of the object

Do we need online 3D in cultural heritage?

Saying that …

we need 3D models since they provide
three dimensional view of the object

… is like saying that …

we have to make videos since
they provide moving images

WHY do we need online 3D in cultural heritage?

3D provides

MICRO LOCATIONS

for

YOUR DATA

WHY do we need online 3D in cultural heritage?

We may call that as a

M I C R O G E O R E F E R E N C I N G

In other words, we can link information to the certain (micro) locations

”micro” locations:
… an engraving on the neck of the statue
… a spark plug in the aeroplane engine
… an altar piece of the church

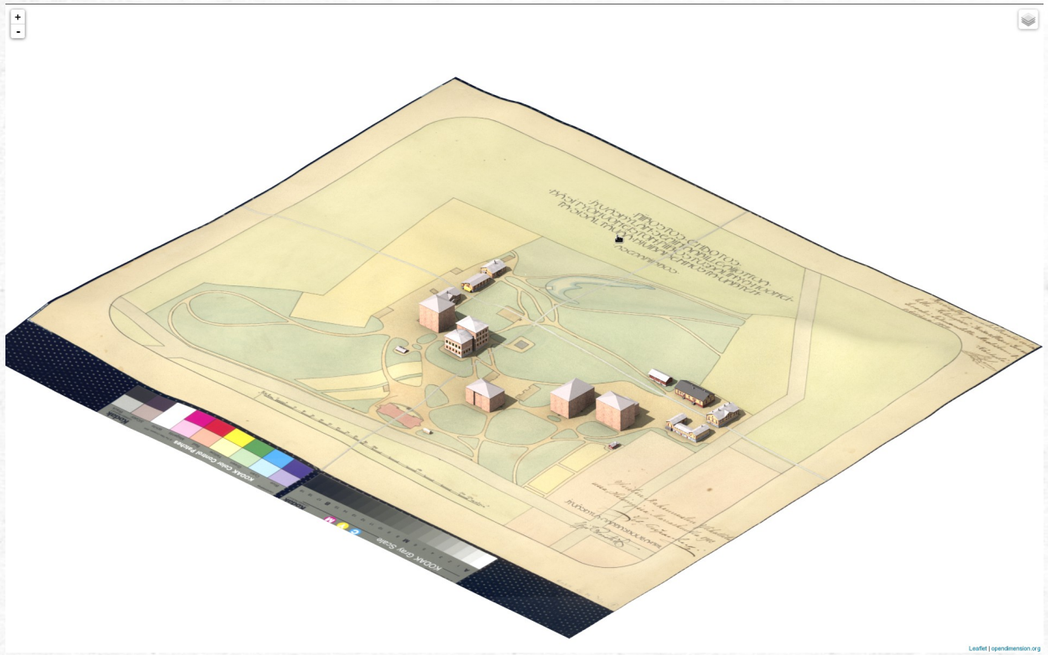

How to navigate in 3D? You can think it as a map!

I am **looking** for interesting things

- the map links separate information bits together

I **read** something interesting and now I want to see on the map

- The map puts information in its place

Two navigation models

L O O K I N G

R E A D I N G

Two navigation models for 3D content

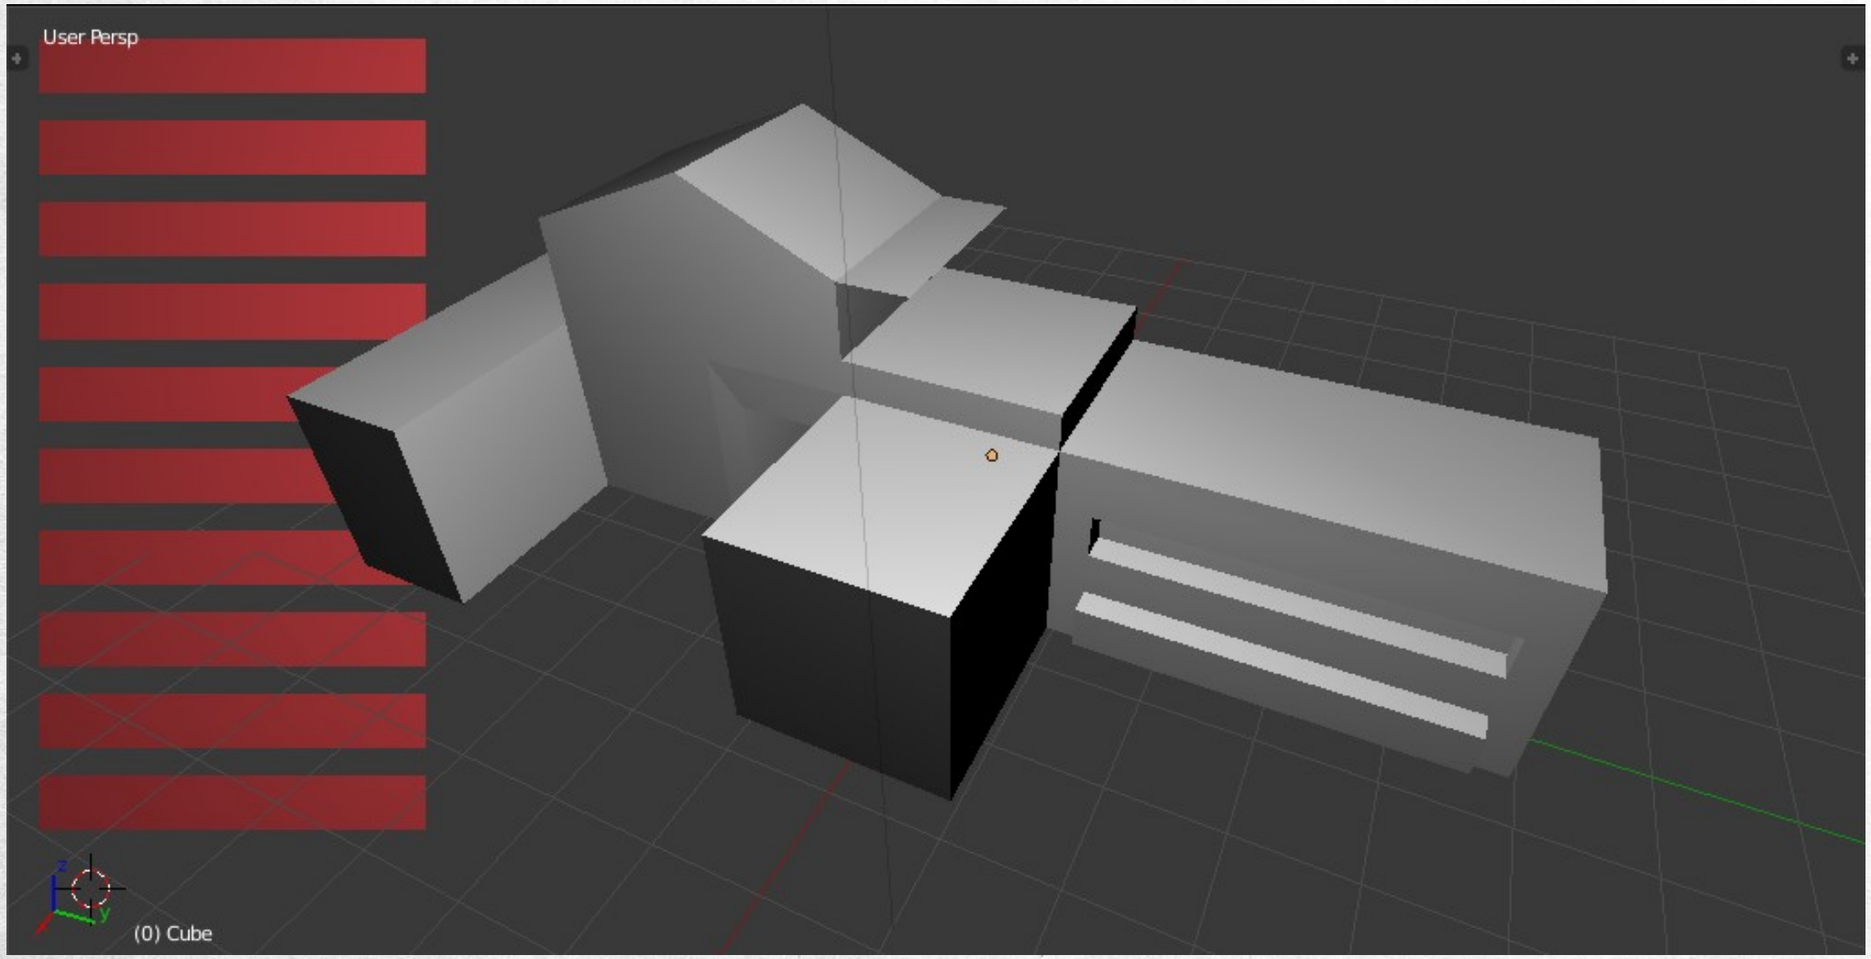

L O O K I N G

- visual
- immersive
- ”wondering”
- attractive
- new for many users

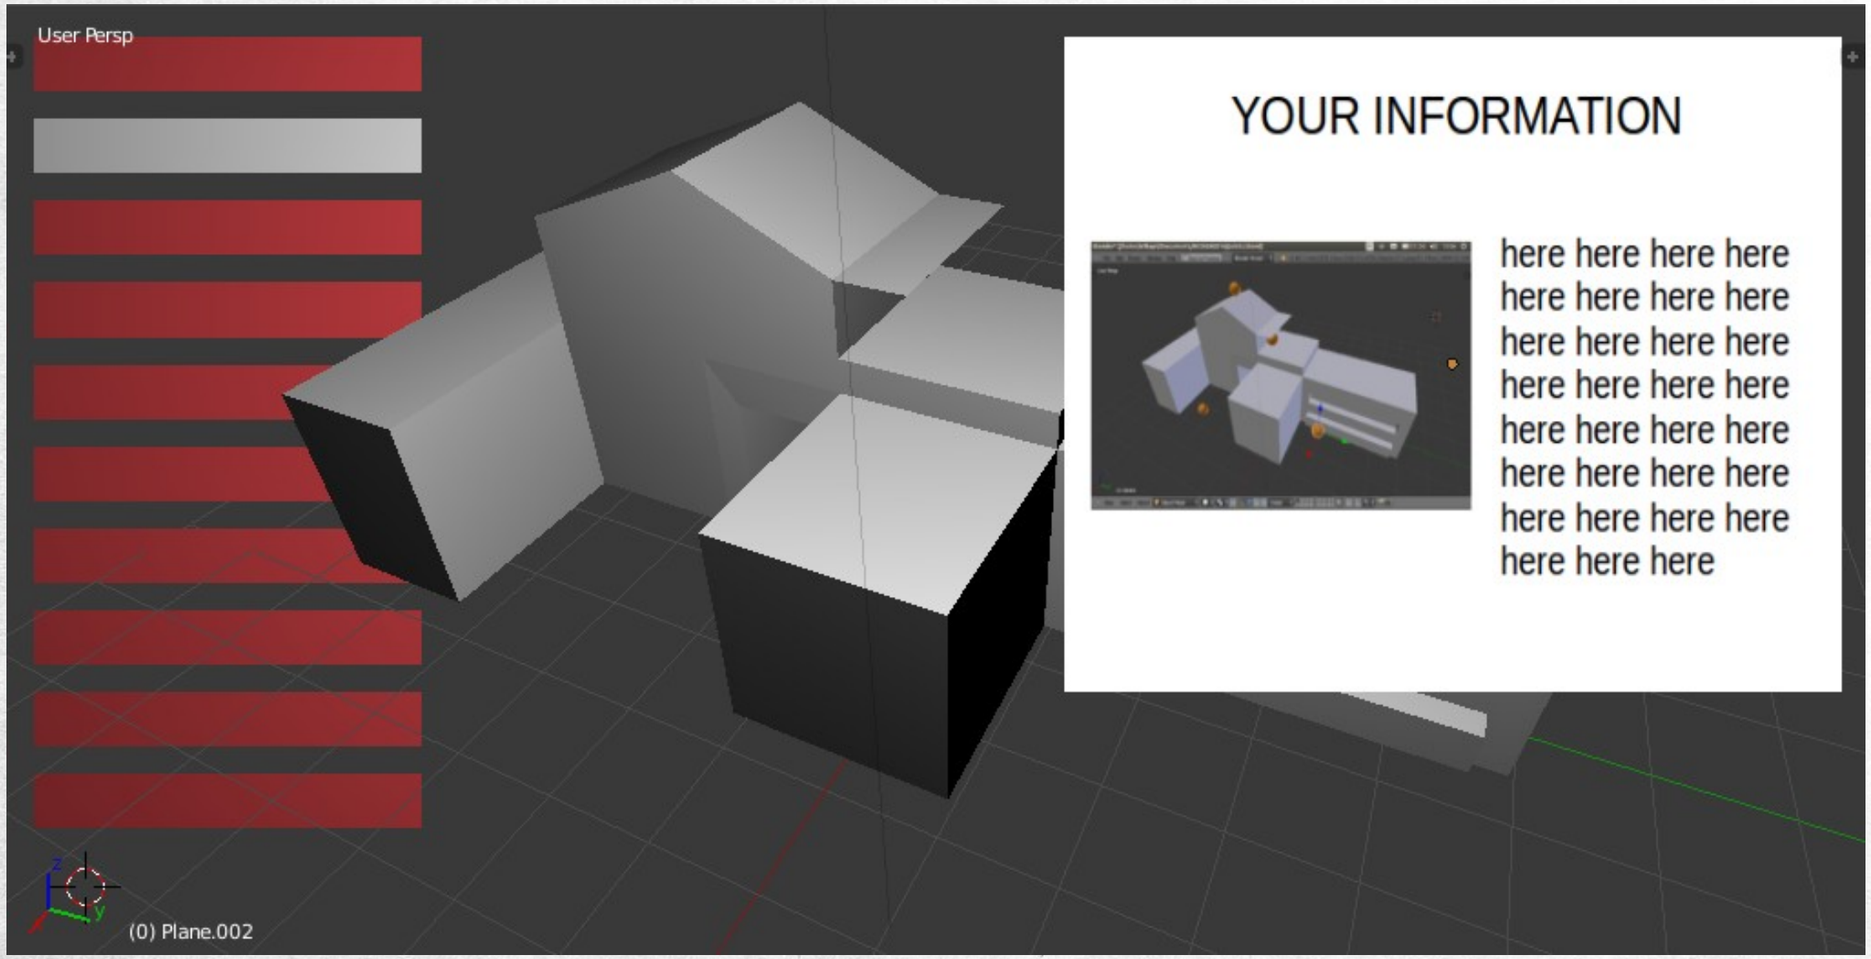

R E A D I N G

- textual
- structured
- ”academic”
- logical
- familiar

sort of one-click solution. It uses a hosted version of Leaflet, so you don't have to download anything extra.

X3DOM template addon for Blender
Published on Nov 27, 2013
I've been experimenting with X3DOM template system. Early adapters might want to try.

Few points

Treat 3D as an **information linking tool**,
not as a virtual glass case

Provide something for everyone!

- What does the user see with an ancient laptop, pc, mobile phone?

Use 3D models for information **navigation** for your data

- Tell and show something about interesting parts

Use 3D models to **orientate** users according to your information

- Pin photographs and data to the model

Do not reinvent user interface

- If user does not notice that s/he is using 3D you have done a great job!

Think about long-term preservation

A short guide to good 3D online content

It is about information, not about dimensions
