Introduction

Research questions

Does virtual re-contextualization help visitors engage with the physical objects?

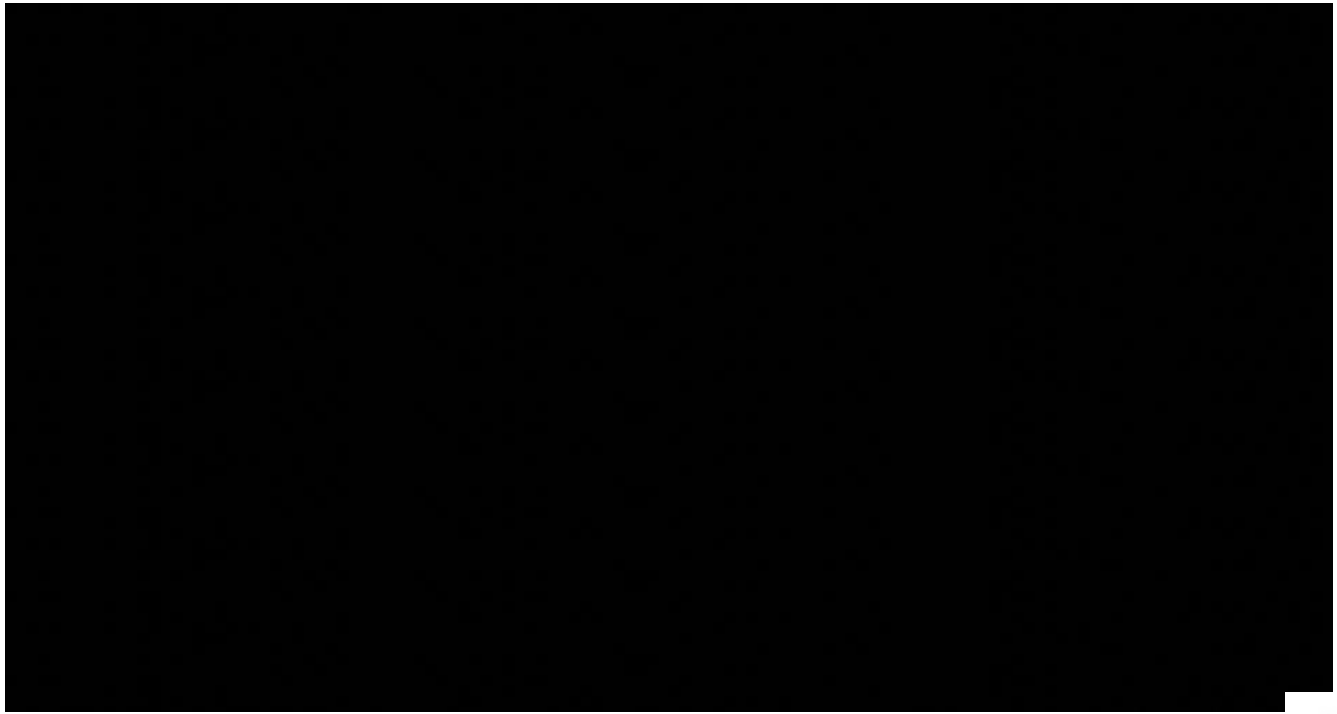

How can instructions help visitors engage with *and* understand the installation better?

Research questions

Does virtual re-contextualization help visitors engage with the physical objects?

How can instructions help visitors engage with *and* understand the installation better?

DOMUS Installation

Research questions

Did virtual re-contextualization help visitors engage with the physical objects?

Outcomes

Visitors who looked at the real objects *first*…

- Asked more (and more diverse) questions.
- Referred to the touch screen content more often.
- Were better at remembering where objects were located.
- Were better at navigating the virtual space.

Outcomes

What happened?

Attention is *limited*, *motivated* and *selective.*

S. Bitgood (2000)

Outcomes

A virtual experience should be embedded
in the museum visit *physically* and *intellectually,*

but it should also be part of the (natural) experience flow
of the exhibition as a whole.

Instructions

Does virtual re-contextualization help visitors engage with the physical objects?

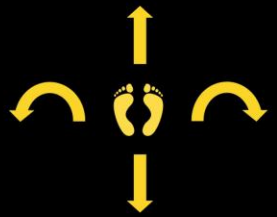

How can instructions help visitors engage with *and* understand the installation better?

Storytelling intro

Instruction intro

Gebruik de pijlen op de vloer
om door het huis te lopen.

M.D. Merrill's Principles of Instruction (2002)

Instructions should be…

1. Demonstrated
2. Applied
3. Task-centered
4. Activates relevant previous knowledge
5. Integrated with everyday life

Instruction results

Instruction A

- Only provides *Task-centered* instruction

Instruction B

- *Demonstrated* interaction through text/images
- *Applied* interaction in DOMUS

Conclusion

A virtual experience should be part of the (natural) experience flow of the exhibition as a whole.

Good instruction should instruct *and* motivate.
