Initiators of NODEM Hong Kong 2012

Dr. Sarah Kenderdine
Research Centre for Innovation in Galleries, Libraries, Archives and Museums (iGLAM) / Applied Laboratory for Interactive Visualization and Embodiment (ALiVE), City University of Hong Kong

Dr. Halina Gottlieb
The Interactive Institute, NODEM, Stockholm

Dr. Ng Bee Chin
Nanyang Technological University, Singapore

Organizers of Keynotes, Exhibitions and Special Sessions

Dr. Sarah Kenderdine, iGLAM and ALiVE, City University of Hong Kong

Dr. Halina Gottlieb, DIHA, NTU and The Interactive Institute, NODEM, Stockholm

Dr. Ng Bee Chin, DIHA, Nanyang Technological University, Singapore

Dr. Dagny Stuedahl, The Interactive Institute, NODEM, Stockholm

Dr. Nancy Proctor, Museums and the Web, United States of America

Rich Cherry, Museums and the Web, United States of America

Local Organizing and Working Group

CityU project team

Sarah Anaïs Aubry
Department of Chinese, Translation and Linguistics

Kyle Chung
Centre for Innovation in Galleries, Libraries, Archives and Museums (iGLAM)

Dr. Sarah Kenderdine
Centre for Innovation in Galleries, Libraries, Archives and Museums (iGLAM)

Christopher Mattison
Hong Kong Advanced Institute for Cross-Disciplinary Studies (HKAICS)

Fion Ng, School of Creative Media, CityU

Waltraut Ritter
Centre for Innovation in Galleries, Libraries, Archives and Museums (iGLAM)

Leonard Steinbach
Department of Chinese, Translation and Linguistics (CTL)

Joey Wong
Hong Kong Advanced Institute for Cross-Disciplinary Studies (HKAICS)

Additional team members
Daniel Chan
Yuanzuo, Hong Kong

Becky Lam
Hong Kong

Robert Trio
Hong Kong Maritime Museum

Special thanks to:

Prof. Jeffrey Shaw, SCM, CityU

Prof. Jonathan Webster, CTL, CityU

Prof. Paul Cammack, AI, CityU

Prof. Kingsley Bolton, CLASS, CityU

Bobo Lee, SCM, CityU

Michelle Kwok, SCM, CityU

Joe Leung, SCM, CityU

Volker Schubert, Circle Group, Australia

Hiroko Kusano, Museums and the Web

Prof. Luke Kang Kwang, Nanyang Technological University, Singapore

Christina van Dorrien, CEO, The Interactive Institute, Sweden

Christina Öhman, The Interactive Institute, Sweden

Tony Sin, Consultant, Hong Kong

Lydia Ngai, Head Librian, Asia Art Archive, Hong Kong

Chuck Sykula, Consultant, Hong Kong

NODEM 2012 HONG KONG

Future Culture: [In]tangible Heritage | Design | Cross Media brings together leading theorists, practitioners and artists in conversation about the future of digital heritage, creative practices, design and emerging technologies. Pioneers from diverse countries and cross-disciplinary fields focus on a range of issues covering new forms of heritage interpretation and the future of new media at the forefront of museum design. Emphasis has been placed on cutting edge research and practice from around the world, with a focus on tangible and intangible heritage in Asian contexts. The symposium is intended for museums practitioners throughout Hong Kong, China and Taiwan, for researchers interested in forms of cultural mediation, students of cultural heritage and designers of new media.

The three-day symposium includes day-long strategic workshops: **Digital Intangible Heritage of Asia** and the inaugural **Museums and the Web Asia**.

Future Culture: [In]tangible Heritage | Design | Cross Media is the formation of a new network of academics and artists, designers and students throughout Asia, informed by the world's leading practitioners.

Future Hong Kong

The city of Hong Kong is a nexus of culture and design initiatives with a burgeoning recognition of cultural heritage, and is actively seeking to expand its field of influence to garner and support cultural heritage throughout the Asian region.

Hong Kong, as home to the creation of world-leading exhibitions of tangible and intangible cultural heritage through innovative research and design, is the perfect place to create this forum and network which will help participants stretch the boundaries of museology and curatorship. Today's best exhibitions are redefining what intangible and tangible heritage means to a society where audiences and communities have become active participants, no longer passive observers, in the knowledge transfer that is our calling.

This conference will create an ongoing regional forum, with Hong Kong as its core, for the development and exchange of ideas and experiences. Hong Kong Galleries, Libraries, Archives and Museums sare the central focus of this dialogue.

In 2006, Hong Kong hosted a seminal conference titled 'New Heritage: Beyond Verisimilitude', centered on emerging directions in the representation of cultural heritage. Future Culture in Hong Kong again takes up the challenges initiated by 'New Heritage' to create expanded and transdisciplinary visions for cultural activity and heritage interpretation using digital techniques.

ALL KEYNOTE SESSIONS
LEVEL 3
M3017

Sunday 2 December	Duration	Theme	Event
17.00-18.00	60 mins	Registration	Welcome
18.00-20.30	150 mins	Opening Reception	Exhibitions

Monday 3 December	Duration	Theme	Speaker
9.00-9.10	10 mins	Welcome	Prof. Paul Cammack
9.05-9.25	15 mins	Opening remarks	Halina Gottlieb, Ng Bee Chin, Dagny Stuedahl

KEYNOTE SESSIONS & EXHIBITIONS
2-4 DECEMBER

Sarah KENDERDINE

Sarah KENDERDINE

Dr. Kenderdine researches at the forefront of interactive and immersive experiences for museums and galleries. In widely exhibited installation works, she has amalgamated cultural heritage with new media art practice, especially in the realms of interactive cinema, augmented reality and embodied narrative. She is a pioneer in panoramic and stereoscopic display systems and content creation. Dr. Kenderdine holds the position of Special Projects, Museum Victoria, Australia (2003–) and is Visiting Assoc. Prof., Director of Centre for Innovation in Galleries, Libraries, Archives and Museums (iGLAM) and Director of Research at the Applied Laboratory for Interactive Visualization and Embodiment (ALiVE), City University, Hong Kong. Recent books include the co-edited, co-authored *Theorizing Digital Cultural Heritage: a critical discourse*, Cambridge: MIT Press, 2007 (third reprint 2010) and *PLACE-Hampi: Inhabiting the Panoramic Imaginary of Vijayanagara*, Heidelberg: Kehrer Verlag, 2012. She has interactive installations on UNESCO world heritage sites including Angkor, Cambodia; The Monuments at Hampi, India; Olympia, Greece and at numerous sites throughout Turkey. In 2012, she directed *Pure Land: Inside the Mogao Grottoes at Dunhuang* and *Pure Land Augmented Reality Edition* in collaboration with the Dunhaung Academy and *ECloud* (for Europeana). She conceived and curated *Kaladham | PLACE-Hampi* as a permanent museum located at Vijayanagar, Karnataka, inaugurated in November 2012.

MUSEUMS AND THE WEB ASIA SPECIAL SESSION
5 DECEMBER

Nancy PROCTOR

Nancy PROCTOR

Nancy Proctor is co-chair of Museums and the Web. With a PhD in American art history, she began publishing online exhibitions in 1995 with Titus Bicknell at TheGalleryChannel.com. TheGalleryChannel was acquired by Antenna Audio, where Nancy led New Product Development from 2000-2008. From 2008-2010 she was Head of New Media Initiatives at the Smithsonian American Art Museum, and since 2010 leads Mobile Strategy and Initiatives across the Smithsonian. Nancy served as program chair for the Museums Computer Network (MCN) conference 2010-2011, co-organized the 2008-2010 Tate Handheld conferences, manages the MuseumMobile.info wiki and is Digital Editor of *Curator: The Museum Journal.*

Rich CHERRY

Rich CHERRY

Rich Cherry is a partner and senior consultant with Museums and the Web, where his practice focuses on the strategic application of technology in cultural heritage institutions, museum operations management, construction planning and management, large-scale capital project management, workflow management and systems integration for visitor services, membership and retail, security and facility systems. He is also co-chair for the Museums and the Web Conference, now in its 17th year and averaging 600 attendees from more than 40 countries.

Previously he was the Director of the Balboa Park Online Collaborative (BPOC), a consortium of 27 cultural organizations focused on shared technology services. He has held positions as the director of Operations at the Skirball Cultural Center in Los Angeles, the CIO and Director of Facilities at the Solomon R. Guggenheim Museum and the CIO of the Albright-Knox Art Gallery. He has taught New Media theory, web design and animation in the Media Studies department at the State University of New York at Buffalo.

He serves on the Magnetic Museums Advisory Committee and the Advisory Committee of the Horizon Report Museum Edition, is a Convening Member Content & Scope Workstream for the Digital Public Library of America, and is a member of the New Mexico Highlands University Media Arts' Americorps Program Advisory Committee.

Halina GOTTLIEB

Ng Bee CHIN

Dagny STUEDAHL

Halina GOTTLIEB

Dr. Halina Gottlieb is the founding director of NODEM (Nordic Digital Excellence in Museums), co-founder of the DIHA (Digital Intangible Heritage in Asia) interdisciplinary research cluster. She is also the coordinator of the Knowledge Triangle network at Nordic Council of Ministers (2011-2014) and, since 2006, she is the director of Digital Heritage Center, a spin-off from the Interactive Institute/Vision for museums. Halina Gottlieb has been a member in the Executive Committee of EPOCH (European Network of Excellence in Cultural Heritage), as well as the Swedish representative for the EPOCH Network of Expertise Centres (2004–2008). Conducting research on Digital Heritage, an emerging interdisciplinary area of study that connects digital technologies, museums studies, interaction design and participatory design, she has earned the first Scandinavian PhD title in this innovative field with a dissertation entitled 'DESIGNING ENGAGEMENT FOR ART – Exploring Interfaces and Interpretive Content of Digital Heritage Artifacts in Museum Environments.'

Ng Bee CHIN

Ng Bee Chin (PhD in Linguistics, La Trobe University) is currently an Associate Professor in the Division of Linguistics and Multilingual Studies in Nanyang Technological University Singapore. She works mainly in the area of bilingualism and multilingualism with a focus on the impact on language contact on individuals and the community they live in. Her research is interdisciplinary in nature and her collaboration with Halina Gottlieb from the Interactive Institute in Stockholm has focused her work on the role of language as a critical aspect of intangible heritage. Together, they founded an interdisciplinary research cluster, DIHA – Digital Intangible Heritage of Asia. Her research in this area focuses mainly on the visualization of language, the mediating force behind culture and heritage. This has led to several collaborative projects on various aspects of preserving intangible heritage (e.g. language and identity, language endangerment, language and ecology and language and nature).
See http://diha.ntu.edu.sg/.

Dagny STUEDAHL

My research explores cultural perspectives of designing and communicating with digital technologies in museums and cultural heritage organizations. I am working especially within the methodological framework of co-design involving both museum visitors and museum professionals in development projects. My interest is especially on exploring new concepts of participation in museums that the introduction of technology propose.
I am working with creative design methodologies, using perspectives from actor-network theory to frame the role of technology - in design and in use. I did my Phd on cultural aspects of participatory design in a national project on technology enhanced learning at the workplace (NEMLIG 2000-2002), and have since worked with design projects related to museum education and communication. Currently, in the project CONTACT (2009-2013) funded by the VERDIKT programme in Norwegian Research Council I focus on involvement of communities, and especially young users. Conceptually I take departure from users cultural practices, defined as their multimodal literacies and identities in relation to their use of digital media. This departure point works as a theoretical and methodological bridge into young visitors engagement with objects and representations, narratives, artifacts in museums and cultural heritage institutions. From 2013 I will work on a national project on learning in science center called VITEN.

InterMedia University of Oslo, Norwegian University of Life Sciences

CENTRE FOR INNOVATION IN GALLERIES, LIBRARIES, ARCHIVES AND MUSEUMS

iGLAM

The world is being transformed and informed by hyper-complex interdependencies. Entanglements of socio-cultural, political and biophysical systems are emerging in response to global change. New technologies have been coupled to cultural and natural heritage resulting in new ontologies, heritage practices and an unprecedented emergence of theoretical challenges. iGLAM responds to this expansion of traditional definitions and challenges within galleries, libraries, archives and museums (GLAMs), and the intensification of demand for the interpretation of tangible and intangible heritage worldwide. iGLAM is an internationally active applied research centre focusing on pioneering digital tools for new types of cultural experiences based on large-scale heterogeneous data.

In Hong Kong, China and throughout Asia, governments are pursuing vigorous culture and heritage programs, expanding local, regional and international museums, redefining heritage agency through cultural tourism and policy, and ratifying heritage objects as nationally and globally significant. iGLAM offers an intellectual and pragmatic resource for the delivery of cutting-edge products in this dynamic sector.

iGLAM believes that strong collaborations between academic and GLAM sectors will help yield innovative solutions for current and future challenges. iGLAM recognizes creativity, mediation and distribution as central to the processes of reinterpreting heritage in the cultural imaginary. It advocates and researches new forms of cultural expression and audience participation in a digital context.

HONG KONG ADVANCED INSTITUTE FOR CROSS-DISCIPLINARY STUDIES

HKAICS

The discipline-based mode of organization is no longer viewed as being an optimal way to advance and enrich research on societal and global concerns. A fundamental shift is underway, from researcher-driven, discipline-bound knowledge production to research that is funder- or problem-driven and highly cross-disciplinary.

The Hong Kong Advanced Institute for Cross-Disciplinary Studies (HKAICS) at the City University of Hong Kong develops and encourages creative and innovative research projects that weave together diverse disciplinary approaches. Inaugurated in January of 2011, the Advanced Institute provides a hub where scholars can bring initial concepts and projects to address the challenging issues of our time, and where research work and knowledge can be exchanged and disseminated through seminars, workshops and conferences. Besides collaborating across the disciplines, the Advanced Institute maintains a particular focus on inter-university collaboration, both within Hong Kong and on an international scale. Since its inauguration, the Institute has identified a number of local and global research themes, including the preservation of tangible and intangible cultural heritage, representation through forms of advanced visualization, issues of risk assessment and severe climate change, and modalities of creative knowledge transfer and social entrepreneurship.

NORDIC DIGITAL EXCELLENCE in MUSEUMS

NODEM

NODEM was founded in 2002 by Dr. Halina Gottlieb in partnership with the Interactive Institute in Stockholm. The Interactive Institute (Stockholm, Sweden) is part of Swedish ICT research and is an experimental research unit that combines expertise in art, design, humanities and information technology with the purpose of conducting world leading applied research. Ever since, a series of international and cross-disciplinary conferences has been held under the auspices of NODEM. The explicitly stated aim of this conference series was to promote encounters between scientists and cultural professionals and stimulate an effervescence of new insights and innovative solutions by assisting and supporting the collaboration between researchers, artists and cultural professionals. Each conference was centred on a core theme allowing the participants to systematically bring contributions and discuss issues aimed at consolidating the inter-disciplinary grounds of employing digital technology in the service of cultural display.

Today NODEM is also an interdisciplinary portal that brings together researchers, SMEs, artists and cultural professionals from all over the world, providing an interface between cutting-edge research, arts and education. The ambition is to create a patrimony of knowledge, know-how and best practices departing from the experiences, innovations and insights that emerge in the context of such collaborations. This valuable repository is freely made available on the www.nodem.org portal.

Originally a Nordic initiative, NODEM has quickly attracted partners and members from beyond the Nordic countries. Currently, NODEM is a vibrant community with over 1000 active members that represent a great variety of fields of activity and areas of research, including interaction design, exhibition design, museum studies, media and communication studies, digital curation, and technologies.

DIHA

DIHA (Digital Intangible Heritage of Asia) – a research and development cluster at Nanyang Technological University in Singapore – was initiated by Ng Bee Chin, Halina Gottlieb and Francesco Cavallaro.

DIHA's explicit mission is to capture the vibrant cultural and linguistic fusion of the Asia-Pacific region through interdisciplinary lenses. As a consequence, this R&D cluster brings together linguists, historians, designers, interactive media specialists, computer engineers, scientists and museum curators from different parts of the university as well as relevant external collaborators.

The focus of this cross-disciplinary cooperation is to highlight the role of languages in intangible heritage and to facilitate and bridge collaborative efforts from different disciplines. The collaboration will result in the conservation and interpretation of cultural knowledge, which is accessible to both researchers and society. In more concrete terms, DIHA's efforts will be oriented towards i) foregrounding the role of languages as repositories of intangible heritage and develop novel ways of accessing language resources; ii) augmenting the selection of archiving systems for tangible and intangible heritage, as well as the selection of interactive tools and novel interfaces for communication between memory institutions and visitors; iii) stimulating the collaboration and knowledge transfer between academia, memory institutions, R&D institutes, ICT & Creative Industry; iv) supporting and expanding collaboration between students, researchers and faculties at NTU and; v) establishing NTU as an international leader in the field of intangible heritage interpretation.

MW Asia

Museums and the Web is the largest international conference devoted to art, science and natural and cultural heritage content online. For over 16 years it has been designed by and for museum professionals to feature the best digital work from around the world and highlight the use of new technologies in the museum context.

For the first time in Asia, Museums and the Web proposes an inaugural one-day special session on 'New Ways of Working and Playing in Museums' December 5, 2012, with presentations by leading museum technologists from North America, Europe, Middle East and Asia Pacific. MW Asia is run in conjunction with NODEM 2012 Hong Kong Future Culture: [In]tangible Heritage | Design | Cross Media.

From web to mobile, from social media to creative commons, and from linked open data to cultural collaborations – on an unprecedented scale MW Asia is a must-go-to session for all museum professionals and creative practitioners involved in the creation of next generation museums.

MW Asia is intended to be the first of an annual event in the region.

New Technologies and the Future of Cave Interpretation

Pure Land immerses visitors in the quintessential heritage of hundreds of Buddhist grotto temples, an art treasury abounding with murals, statues and architectural monuments. This UNESCO World Heritage site, also known as the Caves of the Thousand Buddhas, is located at Dunhuang, a small town in northwestern China that is an oasis in the Gobi desert. It was a gateway to and from China on the ancient Silk Road, which carried trade between China, western Asia and India from the 2nd century BC until the 14th century AD for over 1000 years. Using pioneering virtual reality technology, artists and scientists at CityU have developed an extraordinary new animated 3D experience. Visitors are immersed in a large 360-degree panoramic projection theatre that gives a true-to-life experience of being inside a cave temple and seeing its magnificent Buddhist wall paintings at one-to-one scale. Figures and objects in these paintings are dramatized by means of spectacular interactive 3D animations and digital effects that reveal their painterly beauty and underlying narrative meanings.

There are over 700 caves at the site of Dunhuang, of which 492 still contain rich murals and sculptures. In order to ensure their long-term preservation, the Dunhuang Academy only opens a few caves at a time to visitors. At Dunhuang there is an obvious tension between the desire to show this rich and important treasury to the world and the ongoing protection of the caves. Closing important and unique world heritage caves to ensure preservation is an increasing worldwide practice as for example France's Lascaux Caves and Spain's famous Altamira Cave. Today, when the needs of heritage conservation and preservation are increasingly recognised, digital tools such as laser scanning and high-resolution photography occupy crucial roles in providing continuing access for nonspecialists and scholars to sites under threat.

Pure Land's use of this high-resolution photography and laser scanning data constitutes a 1:1 scale virtual facsimile that reframes and reconstitutes the extraordinary wealth of paintings found in the caves at Dunhuang. The datasets of Cave 220, with its richly narrative murals, become the subject for innovation in heritage interpretation by augmenting its architectural and photographic representations with animation, 3D modeling, pictorial re-coloring, digital enlargement and a rich sound design. These multi-layered multi-media enhancements can be interactively explored, analyzed and understood as an embodied 3D visual experience that brings new life to the aesthetic, narrative and spiritual drama of these extraordinary cave paintings and sculptures. In this way *Pure Land* provides ground breaking conceptual, technological and operational paradigms for the future of digital preservation, cultural heritage interpretation and an embodied museography.

Augmented Reality and the Cultural Imaginary

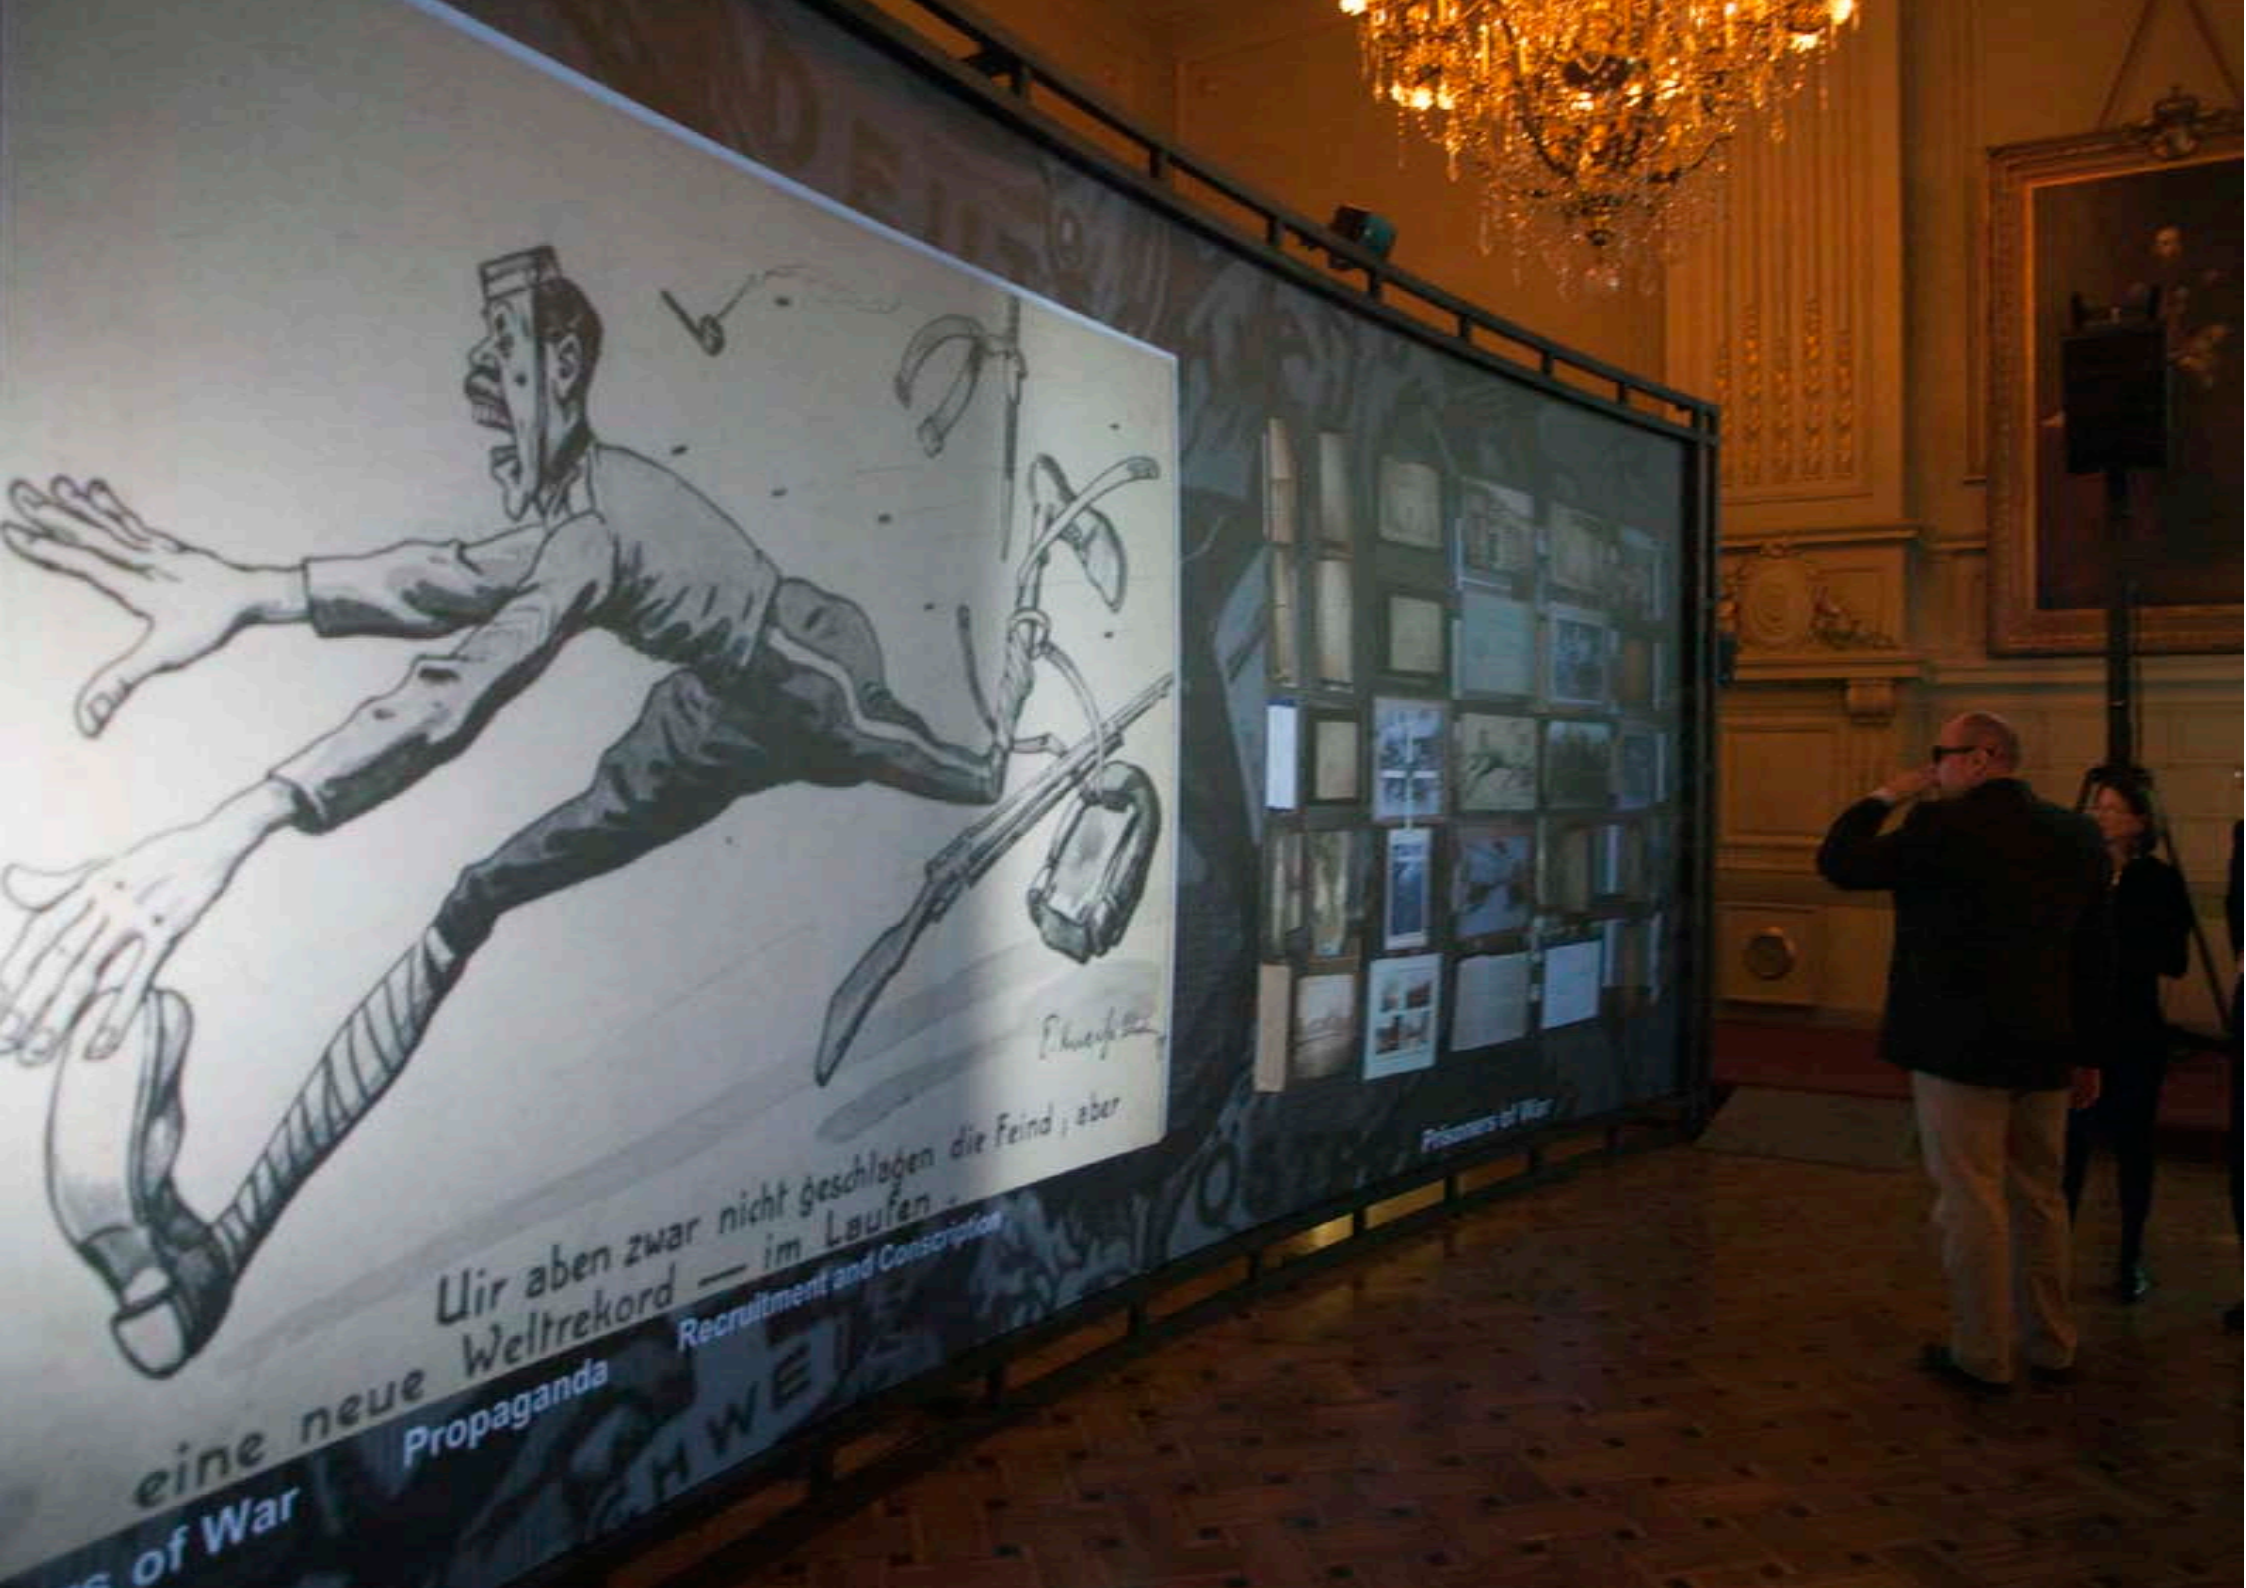

Pure Land: Inside the Mogao Grottoes at Dunhuang is a seminal research project that envisions the future of digital preservation, cultural heritage interpretation and embodied museography. The *Pure Land* project was initially developed in a 360-degree 3D projection environment to provide a fully immersive animated experience of the Mogao Caves at Dunhuang in northwest China (see preceeding pages).

As a corollary to this 360-degree projection of *Pure Land*, the *Augmented Reality Edition* renders virtually the paintings and sculptures of Cave 220 within the architecture of a U-shaped installation room that has similar proportions to the actual cave at Dunhuang. The imagery appears on two tablet-PC screens that visitors can hold in their hands and use as mobile viewing windows. Visitors explore features of the actual cave within the space of the installation room. This is made technically possible by a number of infrared cameras that accurately track the position and orientation of the tablet-PC's as they are being handled by viewers. Computers then render the appropriate views of the actual Dunhuang cave, which are sent to the tablet screens via Wi-Fi.

The walls of the installation room are covered with full-scale photographic prints displaying laser scans of Cave 220's architecture which were made by the Dunhuang Academy. This imagery provides both a structural and aesthetic alignment between the space of the installation room and that of the actual cave. The original 'point cloud' laser scans have been converted into a 3D polygonal mesh, which form the virtual surface structure onto which the Dunhuang Academy's high resolution photographs of Cave 220's paintings and sculptures are rendered. This composite 3D representation is what visitors see on the tablet-PC screens. The *Augmented Reality Edition* of *Pure Land* demonstrates the future of mobile media as a means of virtually embodying 1:1 scale life-size cultural heritage experiences, creating a space of conjunction between real and virtual formations that gives transacted aesthetic expression to Dunhuang's treasury of wall paintings and sculptures.

Interactive Archive of World War 1

ECloud is an interactive spatial browser for the re-discovery of personal cultural data based on the crowdsourced World War 1 archives of Europeana <www.europeana1914-1918.eu>.

ECloud transforms linear browsing of web based information into an embodied experience. Inside a custom designed 9 metres wide x 3 metres high 3D projection environment, seminal datasets from the Europeana archive become a dynamic amalgamation of personal stories, associated image clouds and soundscapes. Using the semantic relationships in existing metadata, *ECloud* takes advantage of Europeana APIs and high-resolution content existing in Europeana partner repositories. *ECloud* is a prototype designed to demonstrate for museums and cultural organisations a powerful situated exhibition for engaging and inspiring visitors with the vast wealth of cultural data available in Europeana.

T_Visionarium

T_Visionarium (2008) is a fully immersive interactive televisual installation that re-presents TV data so that viewers can explore and actively edit a multitude of stories in a panoramic three dimensional space. Its database of over 24,000 video clips is segmented from 28 hours of broadcast television, and each of these clips is tagged with metadata that describes its essential narrative properties. Up to 300 of these video clips are simultaneously displayed around a circular 3D projection screen (AVIE) developed at the UNSW iCinema Research Centre, and using a 'wand' the viewer can dynamically select, re-arrange and link these video clips at will, composing them into combinations based on relations provided by the metadata. This new kind of spatial connectivity gives rise to a revolutionary way of seeing and re-conceptualizing TV in its aesthetic, physical and semantic dimensions, and to an exciting new form of interactive television.

APPLIED LABORATORY FOR INTERACTIVE VISUALIZATION AND EMBODIMENT

HONG KONG SCIENCE TECHNOLOGY PARK, SHATIN

ADVANCED VISUALIZATION AND INTERACTION ENVIRONMENT

PLACE

Applied Laboratory for Interactive Visualization and Embodiment (ALiVE)

Situated at the Hong Kong Science Park in Shatin, ALiVE is an interdisciplinary research initiative of the School of Creative Media, City University of Hong Kong, an incubator and innovations showcase for new forms of creativity at the cutting edge of digital media in society. Leveraging technological advances in cinema, games, and mobile, networked and participatory media, ALiVE researches new modes of immersive interactive experience that are of great importance to culture, entertainment, education and industry. Its pioneering installations are made up of unique display environments, production systems and computer graphics techniques. ALiVE builds on creative innovations that have been made over the last ten years at the UNSW iCinema Research Centre, ZKM Centre for Art and Media and at Museum Victoria. Its challenge-led research programs are formulated in response to specific academic, cultural and industrial contexts in Hong Kong and mainland China. This is supported by partnerships with major digital media centers in Europe, USA, Asia and Australia. Examples of seminal heritage applications recently undertaken by ALiVE include: *Pure Land: Inside the Mogao Grottoes at Dunhuang*, *Pure Land Augmented Reality Version*, *Rhizome of the Western Han* (2010), *iJiao* (2011), *Tripitaka Koreana 360* (2012) and *ECloud* for Europeana (2012).

ALiVE's core research themes are:

The theory, practice and aesthetics of interactive narrative, which is a basic formative of meaning and cognition in the digital domains.

The extension of kinaesthetic, embodied and the enactive dimensions of multimedia experience to enable the interpretation of tangible and intangible cultural knowledge for galleries, libraries, archives and museums.

Visual analytics, information aesthetics and HCI strategies that enable semantic navigation of massive heterogeneous multimedia databases for the digital humanities.

Gaming, animation and special effects techniques that enable situated, immersive multi-player game environments and immersive mixed reality situations of enlivened social interaction and educational experience.

Geographically distributed and mobile media situations to enable convergent communication and ubiquitous high-definition platforms in cyberspace for diverse cultural, social and professional exchanges.

ALiVE PERSONNEL:

Prof. Jeffrey Shaw (ALiVE Director)
Chair Professor of Media Art, Dean of the School of Creative Media and Director of the Centre for Applied Computing and Interactive Media at City University of Hong Kong, Co-director of the UNSW iCinema Research Centre.

KUMBURN, GYANTSE, TIBET
INSTALLATION & IMAGES
THOMAS LAIRD

Lukhang Shambala Mandala Buddha Life size detail

Detail, Gyantse Chapel 2WA, bottom of Rainbow Buddha

Imaging process

Thomas Laird created a set of tools to document murals across Tibet. Over the past 20 years he has captured life size resolution images of more than 250 of the finest, and oldest, murals painted in Tibet during the past thousand years. He uses custom tools and means to field capture the raw data of the mural images he creates. The rig for his camera capture, the type of capture, (spherical or planar) the software used to render and the final image all vary with each mural, in response to the specific constraints of the site and the mural. During editing he works to convey what would be visible at the site if perfect lighting were installed. He lights and edits the murals to minimize distractions such as bad varnishes applied to the murals at a later data. Such tools allow him to address any number of issues including that of the 24K gold on Tibetan murals. The gold does not reflect across the entire mural when seen on site. It appears as black on one side of a mural, while reflecting bright gold on another side depending on lights and location of the camera. Laird creates an image of what the mural would look like if all the gold across a giant mural reflected at one time. In fact if you were onsite the gold would never all reflect from any one viewpoint. Laird's facsimile images give the impression that they are an 'objective' documentary view of the murals, though no such view ever exists.

Laird is displaying one print of his work at the conference in addition to images he will project during his talk. The Kumbum, in Gyantse, Tibet, was built between 1410 and 1420. There are more than 70 chapels in the temple, all of which are covered with murals painted at the time of consruction. The murals of Gyantse Kumbum are considered the finest surviving collection of 15th century Tibetan murals in the world. On the second floor of the Kumbum in the chapel scholars refer to as '2WA', there is a mural of the Buddha at the moment of enlightenment. The original mural is 57 x 86 inches, and Laird's print of the mural is that same size. Note that not only are the Tibetan inscriptions readable, but every fine crack on the original is clearly visible. Final prints are made on archival matte paper. The example on display is printed on canvas which slightly degrades the resolution but is easier to mount in a temporary installation.

Children using multimedia at Asian Art Museum of San Francisco

Re-Imagining the Asian Art Museum of San Francisco

In 2011, the Asian Art Museum of San Francisco launched a new brand. This was the culmination of a deep and rigorous process, led by Director Jay Xu, to reimagine the museum as an institution that sparks connections across cultures and through time, igniting curiosity, conversation and creativity. Through great art experiences, we strive to be a catalyst for discovery, dialogue and inspiration.

An important next step is to understand the ways in which digital technology can help to realize this vision. The rebranding work has been firmly centered on the visitor, which means that this is more than a question of implementation. We need to understand that digital starts and ends with people: the people who make it, and the people who use it. Jay, along with Manager of Web and Digital Media Janet Brunckhorst, will talk about how the museum is keeping people in focus while laying the foundation for a new, enhanced digital experience of its collection and special exhibitions.

Over the past year the Asian Art Museum has begun to focus more at the start of the digital experience: on the people who create digital experiences, as well as the people who use them. With limited resources, the Asian Art Museum team has had to get creative (and strategic) in order to get things done. More importantly, the museum has focused not only on delivering projects, but on creating the conditions for digital success. Jay and Janet will outline those conditions, and along the way share success stories (and maybe some fails!) that show how the museum's attitude to digital has matured over the last year, and where it's headed next.

Jay XU

Janet BRUNCKHORST

Jay XU

Director
Asian Art Museum of San Francisco
United States of America

Biography

Dr. Jay Xu is Director of the Asian Art Museum of San Francisco, and the first Chinese-American director of a major US art museum. Prior to his appointment at AAMSF in June 2008, he had been Chairman of the Department of Asian and Ancient Art (2006-2008) in charge of arts of Asia and of the ancient Mediterranean world including ancient Near East, Greek and Roman cultures, and Head of the Department of Asian Art (2003-2006) at the Art Institute of Chicago, Curator of Chinese Art at the Seattle Art Museum (1996-2003), and Research Fellow at the Department of Asian Art at the Metropolitan Museum of Art (1995-1996). He began his museum career at the Shanghai Museum (1983-1990), and received his graduate training in early Chinese art and archaeology at Princeton University (MA and PhD).

Dr. Xu is committed to deepening understanding of Asian art and culture in the global context, and to advocating global art as an essential platform for cross-cultural understanding and diplomacy. His vision for the Asian Art Museum is to embrace and explore interconnectivity between artistic ideas in Asia and in the rest of the world, between traditional and contemporary art.

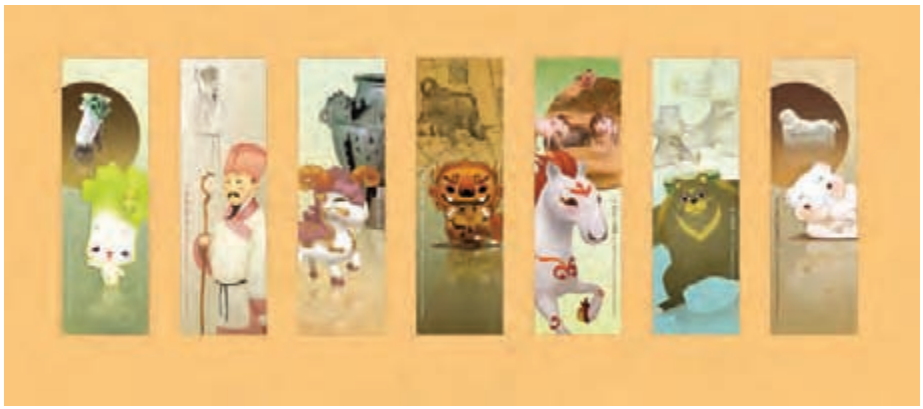

Dr. Xu is a member of the Association of Art Museum Directors, and a member of the Committee of 100—a national non-partisan organization composed of American citizens of Chinese descent who have achieved positions of leadership in the United States in a broad range of professions.

Janet BRUNCKHORST

Manager of Web and Digital Media
Asian Art Museum of San Francisco
United States of America

Biography

Janet Brunckhorst is the Manager of Web and Digital Media at the Asian Art Museum of San Francisco. While she has harboured a lifelong passion for museums, this is her first paid museum gig. Before moving to San Francisco in 2011, Janet worked as a digital consultant in Melbourne, Australia, focusing on user experience, digital strategy, product development and project management. Her clients included start-up The Conversation and the Australian Youth Climate Coalition. Prior to that she was User Experience Manager at Lonely Planet, where she was first exposed to Agile development. These days she is rarely without a Sharpie. Janet has no formal academic training in any discipline related to her field. However, she prizes the critical thinking skills gained in her BA (Hons–English) above all else. She intends to spend her retirement as a docent at the Monterey Bay Aquarium, her favourite place on Earth.

From Digital Archives to New Media Art

Over the past ten years, the National Palace Museum (NPM) in Taiwan has successfully applied information technology (IT) in the museum context. These innovative IT-enabled services are the cornerstones of three large-scale national digital programs, namely: digital archive program, digital museum program and e-learning program. Having been awarded two AAM gold MUSE awards in 2012, the NPM is eager to present its latest IT endeavors, which span animation, film, interactive kiosks and new media art, which greatly augments the visitor's museum experience. This presentation aims to showcase these successful IT applications, to share all the difficulties and challenges encountered and to reveal lessons learned along the way.

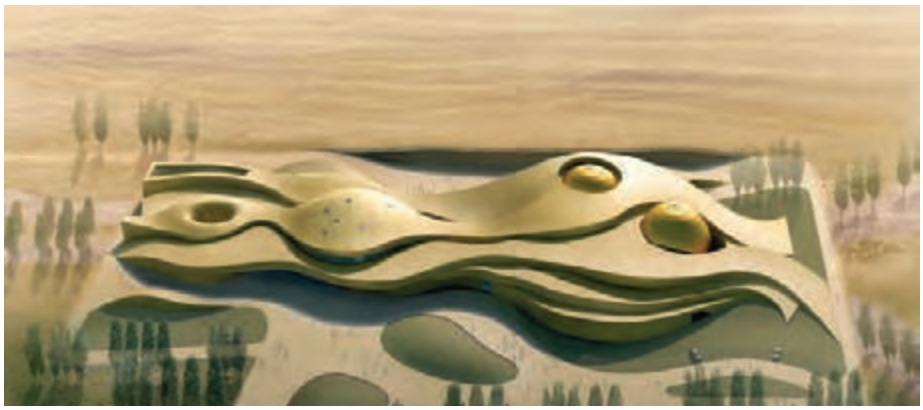

James Quo-Ping LIN

James Quo-Ping LIN

Chief Curator, Division of Education,
Exhibition & Information Services
National Palace Museum, Taiwan

Biography

Dr. James Lin is a senior researcher and chief of the education, exhibition and information services division, National Palace Museum, Taipei, Taiwan. He is also the vice chairman of the Chinese Association of Museums and vice president of the Museum Computer Network-Taiwan. At the National Palace Museum, he is responsible for organizing and developing several national programs to introduce advanced technologies into the museum. He plays an important role in international exchange and cooperation at the Chinese Association of Museums and the Museum Computer Network-Taiwan. He received his MS degree in Computer Science and PhD in Engineering Management at the University of Missouri. Following his degree he passed the national examination and has served at the Taipei National Tax Administration as well as holding management positions at several corporations. He also worked in the Department of Information Management at Huafan University as an associate professor, department chair and director of the computer center. In his teaching and research, he focuses on managing information systems and other related issues.

Conception of and Recent Progress on the Digital Mogao Grottoes

Founded in the 4th Century, the Dunhuang Mogao Grottoes are one of the brightest pearls along the ancient Silk Road, containing what is arguably the largest and richest collections of Buddhist art in existence.

The Dunhuang Academy is continuously exploring new methods for conserving and sustaining the priceless heritage of human culture. As part of this mission, the Academy is developing the Digital Mogao Grottoes project, which is aimed at the preservation and sustainable use of the Mogao grottoes through the utilization of cutting-edge digital technologies.

The Digital Mogao Grottoes project includes the acquisition of data from and processing of Mogao frescoes and painted sculptures, as well as the development of a digital database. This project uses a variety of digital technologies to present the art in the Mogao grottoes from various perspectives. A Visitor Centre will be established at the Mogao site along with a worldwide touring exhibition of holdings from the collection. A vast array of digital products and technologies will be utilized for the construction of the database and the traveling exhibition.

The development of the Digital Mogao Grottoes project is the most effective way to protect the grottoes, as well as to promote general research about the Mogao site and its numerous innovations.

‘数字莫高窟’的构想及其新进展

始建于公元四世纪的敦煌莫高窟可称之为古代丝绸之路上最为璀璨的明珠，是现存规模最大、营造时间最长、内容最丰富的佛教艺术殿堂。

敦煌研究院不断探索长久保存和永续利用珍贵人类文化遗产的方法。随着数字技术的发展，我们提出了建设‘数字莫高窟’构想。这是利用数字科技长久保存和有效利用莫高窟艺术的系统工程。

‘数字莫高窟’包括石窟壁画、彩塑及其相关信息的采集、处理与数字资源库建设；采用多种数字媒体技术多角度多视野展示莫高窟石窟艺术，其中包括利用新建的游客中心、敦煌研究院门户网站以及在世界各地举办敦煌艺术展的机会，让观众领略敦煌莫高窟艺术的魅力；基于数字资源库开发各类数字化产品等。

‘数字莫高窟’的建设，是实现敦煌莫高窟保护与利用双赢的最有效手段，也将推动敦煌莫高窟保护、研究、弘扬工作模式的创新。

Xudong WANG

Xudong WANG

Deputy Director
Dunhuang Academy
Gansu Province, China

Biography

Wang Xudong graduated from the Geology Department of Lanzhou University in 1990, receiving his Master's Degree in Environmental Science and PhD in Engineering from Lanzhou University in 1998 and 2002. He is currently Researcher and Standing Vice-Director of the Dunhuang Academy, and Standing Vice-Director of the National Research Center for the Conservation of Ancient Wall Paintings. He is also a guest professor at Lanzhou University and Northwest University of China. He was a Visiting Fellow at Tokyo National Research Institute for Cultural Properties in 1993–1994 and 2000–2001, and a Visiting Fellow at the Getty Conservation Institute in 2005 and 2010.

Professor Wang has successively presided over the preservation of countless frescoes and ruins across Dunhuang, Tibet, Xinjiang and Ningxia, and has chaired over 20 research projects for the Ministry of Science and Technology, the State Administration of Cultural Heritage and Gansu Province. He was named to the list of Excellent Science and Technological Workers, and has been awarded the rank of Outstanding Expert from both The Ministry of Culture and Gansu province. He also has been awarded seven National Invention Awards and provincial scientific and technological progress awards.

Professor Wang is also president of the ISRM Commission on Preservation of Ancient Sites (CPAS), Vice Chairman of the China Association for the Preservation Technology of Cultural Relics, Vice Chairman and Secretary General, Commission on Preservation and Consolidation Engineering of Ancient Sites (CSRME), Committee member for the International Council on Monuments and Sites (ICOMOS), Vice Chairman of the China Dunhuang Grottoes Conservation Research Foundation and Council Member of the United States Dunhuang Foundation.

王旭东，男，1967年2月生。1990年毕业于兰州大学水文地质与工程地质专业，1998年获兰州大学环境科学硕士学位、2002年获兰州大学地质工程专业博士学位，现任敦煌研究院研究员、常务副院长，兼任古代壁画保护国家文物局重点科研基地主任，国家古代壁画保护工程技术研究中心常务副主任，兰州大学兼职教授、博士生导师，西北大学兼职教授、博士生导师。1993年12月至1994年3月、2000年12月-2001年2月先后两次在日本东京文化财研究所研修文物保护技术，2005年1月至6月、2010年12月至3月两次赴盖蒂保护研究所做访问学者。 先后主持敦煌石窟、西藏、新疆、宁夏等地多项壁画和土遗址保护工程，主持承担国家科技部、国家文物局和甘肃省科研课题达20多项。 先后获全国优秀科技工作者、文化部优秀专家、甘肃省优秀专家，获国家发明奖和省部级科技进步奖励7项。 主要社会任职有国际岩石力学学会古遗址保护专业委员会主席，中国岩石力学与工程学会古遗址保护与加固工程专业委员会主任委员，中国文物保护技术协会副理事长，中国古迹遗址保护协会常务理事，国际古迹遗址理事会（ICOMOS）土质文物保护科学委员会委员，中国敦煌石窟保护研究基金会副理事长，美国敦煌基金会理事等职。

Houses Built on Sand: Ensuring Secure Foundations for the Preservation of and Access to Digital Heritage

While we are all in the business of interpreting our heritage to reach as wide an audience as possible, we are increasingly driven to this by the need to attract and satisfy funders. Yet we have to balance the use of scarce resources on preparing and maintaining digital heritage with our responsibilities for the preservation and access to the physical heritage. How do we ensure we exploit new technologies to showcase our heritage and attract a new audience, while continuing our core responsibilities — and reconcile both these with increasingly challenged budgets?

At its foundation in 1994, The International Dunhuang Project (IDP) made a commitment to exploit fully the emerging technologies of the internet and digitization to ensure continued preservation and greater access to the archaeological legacy of Chinese Central Asia. As a largely externally-funded endeavour, it has always had to have one eye on attracting potential funders and increasing user figures. And as a collaboration of largely public institutions, it also has a commitment to long-term preservation both of the original collections and the digital resources.

This presentation will offer IDP as a case study in the adoption of 'a middle way' to achieve these aims. Creating data in itself is a largely unlauded labour but, like architectural foundations, the resulting data has the potential to support edifices that can dazzle and entice in both this and generations to come.

The presentation will also showcase IDP's current work on designing a relatively simple system to record standard and multilingual metadata for multimedia heritage — from a manuscript to an archaeological site — enabling them to be managed, searched and accessed on a unified interface. The model will be made freely available, part of IDP's continuing commitment to share its experience and expertise.

Susan Whitfield at a British Library exhibition opening in Kabul, 2008. Photographer: John Falconer.

Susan WHITFIELD

International Dunhuang Project
British Library

Biography

Dr. Susan Whitfield is an historian of medieval China and the Silk Road and curator of the Stein and related collections of 50,000 Central Asian manuscripts from Dunhuang and other Silk Road sites at the British Library. She has curated several major exhibitions, lectures internationally and has published many books and articles. She also travels regularly along the Silk Road.

Using technology, old and new, to ensure that the collections are preserved for future generations while made fully accessible for this generation has always been an essential part of her work at the British Library. In 1994, along with colleagues worldwide, she was instrumental in establishing an international collaboration to achieve these aims. Although named 'The International Dunhuang Project' (IDP) its remit includes all archaeological artefacts from sites throughout Chinese Central Asia.

With ten major partners hosting multilingual websites in IDP Centres worldwide and over thirty other collaborating institutions, IDP now gives access to hundreds of thousands of images of the Silk Road artefacts and manuscripts, along with rich contextual information.

Most recently, Dr. Whitfield has started work with British Library colleagues on developing projects with institutions and scholars in Afghanistan. She is currently working on several articles and a book, as well as a complete redesign of the IDP database, all due in 2013.

Dragon boat water parade in Tai O, 2012

Community Engagement: Key to the Safeguarding of Intangible Cultural Heritage

The UNESCO Convention for the Safeguarding of Intangible Cultural Heritage 2003 defines that intangible cultural heritage (ICH) means the practices, representations, expressions, knowledge skills that communities, groups and, in some cases, individuals recognize as part of their cultural heritage. As such, ICH safeguarding is to focus on practices and processes rather than on products, and that the practitioners and custodians of ICH must play a central role in safeguarding measures. The need to involve communities, groups and, sometimes, individuals in safeguarding their ICH has been reiterated in several articles of the Convention, particularly in identifying and defining their ICH (Article 11), in the identification and the inventorying of ICH (Article 12) and in gaining access to ICH while respecting customary practices (Article 13). For the implementation of the Convention in Hong Kong since 2006, the Government has endeavored to involve the local communities, groups and individuals in the major safeguarding projects including the territory-wide survey and the inscription of ICH items onto the UNESCO Representative List and the national list. In the early stage of the territory-wide survey in 2009, representatives from the Hong Kong Heritage Museum and the South China Research Center of the Hong Kong University of Science and Technology attended meetings of the Heung Yee Kuk and the 18 District Councils to introduce the survey and to invite them to provide information on local ICH for the survey team to follow-up. The public were informed of the launching of the territory-wide survey through press releases and websites and were invited to identify and submit lists of ICH and the associated ICH bearers. Towards the end of 2012, the Government plans to conduct a public consultation exercise on the draft ICH inventory list drawn up by the survey team and endorsed by the ICH Advisory Committee. During the applications for inscription of Cantonese Opera onto the Representative List in 2008 and four traditional festival items onto the third national list in 2009, the organizing bodies and other stakeholders were deeply involved. The success in the inscriptions not only raises public awareness in local ICH but, most importantly, helps to bring back a sense of identity and continuity to the marginal communities who have long been neglected by society.

Hing Wah CHAU

Hing Wah CHAU

Curator (Intangible Cultural Heritage)
Hong Kong Heritage Museum

Biography

Mr. Hing Wah Chau received his BA from the University of Hong Kong in 1983 and his MA in Archaeology from the Institute of Archaeology, University College London in 1988. He joined the curatorial grade of the Hong Kong Government in 1985 and has been working for many years in the field of archaeology and heritage conservation. He is currently the Curator of the Hong Kong Heritage Museum and responsible for the safeguarding of Hong Kong's intangible cultural heritage as required by the UNESCO Convention for the Safeguarding of Intangible Cultural Heritage enforced since April 2006. His major projects include the first territory-wide survey of intangible cultural heritage (ICH) in Hong Kong and the inscription of ICH items onto the UNESCO Representative List and the national list of ICH in China.

Detail, Asia Art Archive

Asia Art Archive

Many archives today are rethinking the conventional methods of the archive, acting as generators of new paradigms and practices. An archive's collection is the foundation of its day-to-day practices as well as the nucleus of its potential to generate new methodologies in research, knowledge production, and artistic and curatorial activity. Looking at the strategies and methods of some of the most forward thinking archives on art, this lecture will reflect on a growing interest in the subject of archives around the world and their responses to the political and historical legacies and frameworks out of which they have emerged. More than a static repository waiting to be discovered, Asia Art Archive is a proactive platform, its collection existing not in an enclosed space, but in a space that is open and productive, generating new ideas and works that continually reshape the Archive itself. Taking Asia Art Archive as a starting point, this study will explore key concerns of leading art archives today — accessibility and usership, political activation, interpretation, collectivity, connectivity and discursive practices — and their hopes to re-dress paradigms of visibility through the activation of their content.

Chantal WONG

Chantal WONG

Biography

Chantal Wong holds degrees in Art History and Cultural Studies. She has worked in development at Asia Art Archive, HK and Outset Contemporary Art Fund, London and is currently the Head of Strategy and Special Projects at Asia Art Archive.

Scene from 360-degree animated version of Qing Dynasty 'Pirates Scroll' *Besieging the pirates in Lantau* © Hong Kong Maritime Museum

Hong Kong Maritime Museum

The Hong Kong Maritime Museum operates as a public charity in Hong Kong. Within a city that is filled by government operated museums, the institution is in the unusual position of being traditionally required to raise its operating costs from private funds and commercial activities. In the past, the Hong Kong shipping industry has provided the largest amount of this financial support. More recently, the Hong Kong Government has generously agreed to cover the estimated HK $115,000,000 capital cost of relocating the institution from Stanley to Central and to contribute towards the museum's annual operating expenses.

As the museum moves to a newly renovated space at Central Pier 8, and plans unfold for 15 new galleries filled with unique artefacts from Hong Kong's maritime past, the institution faces challenges to expand its stakeholders and make new partnerships in the community.

By effectively exploiting new technology and intangible heritage, opportunities have been identified to help the museum grow and reach new audiences. The museum believes the introduction of new media and digital learning opportunities to the public will help better serve the learning communities of Hong Kong and set the museum apart from other similar cultural organizations in Hong Kong.

With this in mind, HKMM chose City University to be the vector for helping visitors understand 'the known, the unknown and the unknown unknowns' of its world class exhibit, the Qing Dynasty Pirates Scroll. The storyline of this 18-metre scroll revolves around the early nineteenth century anti-piracy campaign of the Jiaqing Emperor who commissioned the Governor General of Liangguang (Guangdong and Guanxi) Bailing to defeat the Zheng pirate federation who operated in the Pearl River Delta and beyond.

Museum Director Richard Wesley will argue that only by the adoption of sophisticated digital presentation techniques can modern cultural institutions hope to encourage their audiences to fully engage with the subtle and complex cultural knowledge locked within key icons such as the Pirates Scroll.

Richard WESLEY

Richard WESLEY

Director
Hong Kong Maritime Museum

Biography

Richard Wesley has served as the Director of the Hong Kong Maritime Museum since December of 2010. He was brought on specifically to spearhead the museum's move from Stanley to Central Pier 8. Richard has extensive experience in the management and operation of museum facilities across Australia. He has worked on projects in New South Wales, Tasmania, Norfolk Island and Western Australia, along with lecturing in Museum Management at University of Sydney for five years. Richard's previous industry positions include: Director of the Norfolk Island Museum, Manager of the Port Arthur Historic Site and Director of Museums and Properties for the National Trust of Australia (NSW).

He holds a Master of Arts Degree from the University of Tasmania and a Diploma of Museum Studies (Sydney) and is the author of a wide range of museum reports completed over the last fifteen years. He has a particular interest in house museums, marine archaeology and the use of objects in storytelling.

Tibetan mural from high resolution imaging. Photo: Thomas Laird

Methods, Meaning and Uses of Life Size Resolution Imagery of Tibetan Murals

My first images of the murals of Tibet, shot forty years ago, failed to convey their power, and it's the lack of good images of the murals of Tibet that have kept them largely unknown. My work is motivated by a desire to change that, to bring this art to the world. Starting ten years ago I began to create 'life size resolution images' of giant murals: today more than 300 murals have been captured, some as large as 10 x 30 feet. The use of digital capture and render tools allows me to make images that create the illusion that one is standing in front of the original.

When approaching hyper-realistic images of ancient Tibetan murals, different people see different meanings. Curators at institutions have been overheard to say, 'We exhibit art, not images of art' even though without these new digital tools such art would remain unknown, even as it is threatened with disappearing.

A monk standing in front of the same image looks once at the mural and then launches into a dialogue about the Buddhist meanings depicted in the mural. He begins curtly, 'Now, the meaning'. The image of the mural allows a conversation with him, or with anyone who knows Tibetan art or history, that would otherwise be impossible.

Such images allow art historians to study a thousand years of Tibetan murals. They could be used by conservators. They are being used by scholars to translate inscriptions on the murals. They allow contemporary Tibetan artists to copy designs for modern works. They are the only means by which museum visitors can see the greatest surviving art treasures of Tibet. Yet these same images allow a monk to give a precise illustrated lecture to students about a particular meditation practice. Simultaneously, for those who know nothing about Tibet, an entire chapter of humanities' art heritage is made visible for the first time. When institutions try to decide who should assess my work I hear them thinking to themselves: Should this be assessed by the Photography Curator, the Asian Art Curator or the Modern Art Curator? In my mind the answer is one word. Yes.

In the 21st century such digital art leaps entirely over the issue of provenance that plagues and empowers so many 'original works of Asian antique art' – even as it allows unprecedented correlations to be established between historical schools of art, and art trends, visible in the portable pieces within a museum, as seen through the lens of large scale murals. The digital capture of mankind's heritage will go forward, at an accelerated pace, with ever greater resolution, in striking new ways that invariably raise questions about appropriation, authenticity, and the nature of originality. Just as photography itself did a century ago.

We do not need to know the answers to these questions to know that the task assigned to those of us, who now have tools that allow this, is both urgent and monumental. Future generations will ask 'You mean you were able to capture this art, and you let it disappear without any record?' Their awe, at every endangered work of art that we can see, that we can share, is the only reason we need to understand as we embark on this work.

Thomas LAIRD

Thomas LAIRD

Independent Photographer

Biography

Thomas C. Laird is an American photographer and writer who has explored the art, culture, history and modern life of Himalayan people for the past 40 years. He was based in Nepal for decades as a journalist, contributing to *Time*, *Newsweek* and dozens of other magazines.

His book of photographs of the murals of the Lukhang, 18th century murals in the Dalai Lama's private meditation chamber in Lhasa, was first published by Thames and Hudson in 2000 as *The Dalai Lama's Secret Temple*. His history of Tibet *The Story of Tibet: Conversations with the Dalai Lama*, Grove, 2006, is now available in 16 languages.

He has created the largest photo library in the world on Tibetan and Himalayan murals, the first such archive in life size resolution. His most recent work, an exhibition of life size resolution prints of ten murals in the Lukhang, is on permanent exhibition at The Rubin Museum in New York City.

He is currently working on *Murals of Tibet*, to be published by TASCHEN in two editions: in a Double Elephant Folio, as last used by Audubon, *Birds of America*, 1853, and in a standard-sized edition. He divides his time between Asia and New Orleans.

High Resolution Analytical Imaging of Cultural Heritage

At Kyoto University, we have developed state-of-the-art ultra-high resolution imaging systems (hardware and software) for applications in the field of cultural heritage. More than 30 systems are being used in Japan, Europe, Asia and Africa on cultural heritage sites and museums. In this talk we shall briefly show the history, technology and some of the projects that have been carried out until December 2012, which include users from more than 50 universities, museums and broadcasting organizations. The large-sized cultural heritages that were documented by these technologies include a wide range of Japanese, Chinese, Egyptian, Korean and European objects. The main imaging technology is based on large flatbed scanning using line-CCD/CMOS cameras with carefully designed components to handle a wide variety of objects.

The main features of these large flatbed scanners are:
* high color fidelity (a color difference of about 1.0-1.5 for IT8 charts)
* minimal light irradiation on the object (less than 1% per scan of the allowable exposure based on museum standards)
* high spatial resolution capable of detecting microscopic scale areas (5-80 microns)
* fast and cost effective to digitize hundreds and thousands of objects in museums and national libraries
* applicable to a wide range of objects of various shapes, sizes and surface characteristics (e.g., 2D to 3D objects; small to large; and dark to shiny)
* non-contact and non-invasive
* can produce analytical information (i.e., spectral and colorimetric)

The imaging techniques that could be performed with the scanner at high to ultrahigh resolution can be summarized as follows:
* High to ultrahigh resolution trichromatic scanning with color difference of about 1.0-1.5 (the commercial cameras are 5-9 or worse)
* Near infrared scanning (780-1000nm)
* Monochromatic multi (hyper) spectral imaging (8 bands or more)
* Trichromatic multi (hyper) spectral imaging (15 bands or more)
* High resolution polarized light scanning for metallic and shiny surfaces
* Transmission light (and reflection light) scanning
* 3D shape and color reconstruction using a 5-axis (5 degrees of freedom) scanner

Ari IDE-EKTESSABI

Ari IDE-EKTESSABI

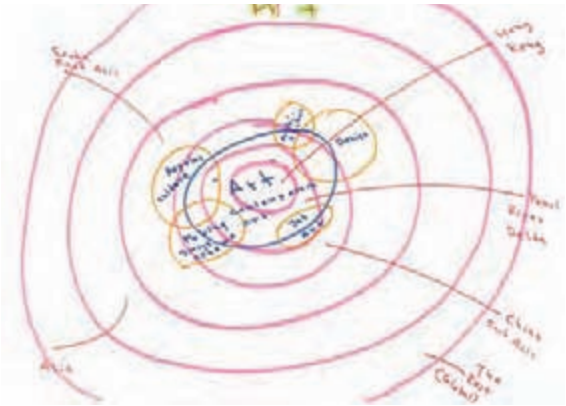

Ari Ide-Ektessabi, PhD, Professor
Graduate School of Engineering
Kyoto University

Biography

Ari Ide-Ektessabi was born in Rasht (Iran) in 1952. He studied at the Faculty of Electronics Engineering, Kyoto University, Japan between 1973-1983, and obtained his PhD in electronics engineering. His field of research was designing systems of charged particle beams for the fabrication and analysis of surfaces and materials. He joined Kyoto University as an associate professor in 1991 and as a professor from 2001. He was the leader of six major projects related to the application of advanced technology in cultural heritage as follows:

* Development of High-resolution Large Flatbed Scanner for Digitizing Large Artworks and Non-Destructive Pigment Estimation Japan Science and Technology Agency, Comprehensive Support Program for Creation of Regional Innovation: Key Seed Projects for Regional R&D, FY 2004-2007
* An Integrated System for Secure and Dynamic Display of Cultural Heritage Japan Science and Technology Agency, Comprehensive Support Program for Creation of Regional Innovation: Regional R&D Resources Utilization, FY 2006-2008
* Developing the Technical Foundation for International Digital Museum, The Feasibility Study Program 2009, Ministry of Education, Culture, Sports, Science and Technology (MEXT), Realization of the System and Basic Technical Elements of Digital Museum
* International Joint Research on High Resolution Digitization of Asian World Heritage Japan Special Coordination Funds for Promotion of Science and Technology, Asia-Africa Science and Technology Strategic Cooperation Promotion Program, FY 2009-2011
* Program for Education of Man Power in the Field of Documentation and Utilization of Asian (China) World Heritage
* Program for Education of Man Power in the Field of Documentation and Utilization of Philippines Tangible and Intangible Heritage (Japan) Government Development Support for UNESCO Activities Grant, Japan National UNESCO committee, Ministry of Education, Culture, Sports, Science and Technology (MEXT), 2010-2012. (A program dedicated to support the collaboration and exchanges in the Asian-Pacific area, for development of Education, Science, and Culture.)

He has published more than 200 papers on material processing, analytical techniques using accelerators, charged particle beams and synchrotron radiation, and a book on the application of synchrotron radiation (Springer 2007). His current interest is focused on ‘Science and Technology for Art’.

M+ Towards a New Model for the Future

With M+ in the West Kowloon Cultural District, Hong Kong is creating a new model for a museum of the 21st century. A museum of its time and, perhaps even more importantly, of its place. M+ is a very ambitious project. Not only will it be a large museum – on the same scale as earlier role models such as The Museum of Modern Art in New York or Tate Modern in London. It is also a museum that aims at developing not only the ways it works with the art, but also with its audiences. It aims at reflecting both the way artists and designers work, and the specificities of Asia's yet developing museum culture. M+ has a strong public service ethos – it is a project for the people of Hong Kong – without disregarding the attraction it will be for the ever growing numbers of visitors to the city. M+ aims to be a project that re-thinks what a museum today could become. With M+ we are not just replicating well-known models in other parts of the world. Rather we are trying to build a new model using the unique Hong Kong experience as a starting point, taking the best from existing models but challenging the givens, creating new forms for presenting creativity from Hong Kong, mainland China and greater Asia.

M+ is a museum of visual culture, including Contemporary (and Ink-) Art, Design, Architecture, Moving Image and aspects of Popular Culture. In recent years some of the most interesting things happening in art have happened in the thresholds between other aspects of visual culture. Between design, architecture, film and what we call art – but also between popular culture and design. This general trend is amplified by Hong Kong's special creative climate where crossovers between different roles are the norm rather than the exception. M+ takes this as one of its starting points – and will be using the concept of what we call Art as a portal through which visual culture may be investigated while the specificities of each genre or type are retained.

A central aspect of the preparatory work for M+ is finding new modes of presentation of either types of work that to date has been forced into a traditional western way of presenting the work – e.g., ink art – or that have not developed mature forms for presentation in the museum context – e.g., moving image or architecture and design. In all these cases we will be looking at various forms of digital models to substitute or enhance the traditional way of presenting material to the public.

Lars NITTVE

Lars NITTVE

Executive Director, M+
West Kowloon Cultural District
Hong Kong

Biography

Lars Nittve was born in Stockholm in 1953. After studies at the Stockholm School of Economics and a M.A. at Stockholm University he served as lecturer in art history at the University of Stockholm from 1978-85. During this same period he held a post as Senior Art Critic at the daily Svenska Dagbladet, Stockholm, and contributed regularly to Artforum magazine, New York.

In 1986 Nittve was appointed Chief Curator at the Moderna Museet in Stockholm, where he curated a large number of high profile exhibitions – both monographic and thematic, among them Walter De Maria, Kandinsky in Sweden, Hilma af Klint and the seminal Implosion: a Postmodern Perspective. From 1990-95 he served as founding Director of Rooseum – Center for Contemporary Art — in Malmö, Sweden, where he organized the entire exhibition programme, including surveys of Susan Rothenberg, Allan McCollum, Sherrie Levine and Andreas Gursky. In July 1995, Nittve became Director of the Louisiana Museum of Modern Art in Humlebaek, Denmark, where he also curated the groundbreaking exhibition Sunshine & Noir – Art in L.A. 1960-1997. In the spring of 1998, he was named the first Director of Tate Modern, London, which opened in May 2000 to great acclaim.

On November 1, 2001, he took up his post as the Director of Moderna Museet in Stockholm where he also, in 2004, co-curated the thematic exhibition Fashination, about the dialogue between art and fashion over the last ten years. Later exhibitions include Time and Place: Los Angeles 1957–1968 (2008); Antony McCall (2009) and most recently Ed Ruscha: Fifty Years of Painting (2010).

Noteworthy during his time at the Moderna Museet was his successful campaign for strengthening the collection — including The Second Museum of Our Wishes, which focused on bringing more works by women artists into the collection and raising 70 million USD. The creation of the innovative Renzo Piano designed Pontus Hultén Study Gallery (opened in May 2008), The American Friends of the Moderna Museet Inc. and the Moderna Museet Malmö, which opened in 2009, should also be mentioned.

Lars Nittve has served on the jury of numerous international prizes and been on the board of a large number of international art organizations. He is the author of several books on art, as well as articles in journals and catalogues in Sweden and abroad. In 2009 he was awarded a PhD HC by Umea University, Sweden, where he has been a Professor of Art History since 2010. He is a member of the Royal Swedish Academy of Fine Art and was in 2010 awarded H.M. The King's Medal in gold, 12th size in the Order of the Serafim's ribbon.

The Past is a Social Network: New Directions in Public Heritage and Collective Memory in a Digital Age

In the span of just forty years — from the final drafting and ratification of the UNESCO World Heritage Convention in 1972 to the present — our understanding of the role of heritage in society has undergone a series of far-reaching changes. The core concepts of 'scientific accuracy', 'authenticity', 'outstanding universal value', and even 'monument' are now the subjects of bitter debate. Among many professionals, the term 'conservation' has given way to 'safeguarding'. Intangible Heritage of beliefs, customs, and craftsmanship — alongside architecture and archaeology — has become a major official concern. The goal of encouraging 'Cultural Diversity' has shouldered aside linear aesthetic trajectories. The development of heritage tourist attractions for economic reasons, no less than historical commemoration, is a driving force in the field. This paper will analyze how Digital Heritage has exerted a major impact in all of these changes, and will survey some achievements, failures and potentials for the further transformation of cultural heritage in the 21st Century.

Foremost among these potentials, this paper will argue, is the ability of Digital Heritage to facilitate simultaneous top-down and bottom-up public reflection and communication on heritage significance, its contemporary relevance and its relation to personal and group identity. The paper will explain how digitally-based, worldwide 'memory communities' may soon become as important to the safeguarding of cultural heritage sites as physical tourism or the shrinking capacities of national monuments authorities. In a world of diasporic movement, cultural hybridity and the use and abuse of heritage icons as potent political symbols, public heritage presentation is already shifting from officially authorized narratives to loud, often passionate, public discussion. Whether that discussion will become increasingly destructive, delusional or democratic will depend in large measure on the emerging character of digital heritage tools.

Neil A. SILBERMAN

Neil A. SILBERMAN

President ICOMOS International Scientific Committee on Interpretation and Presentation (ICIP)
University of Massachusetts Amherst, United States of America

Biography

Neil A. Silberman is president of the ICOMOS International Scientific Committee on Interpretation and Presentation (ICIP) and is a member of the ICOMOS International Advisory Committee and Scientific Council. He is a managing partner of Coherit Associates, an international heritage consulting firm.

Trained as a historian and archaeologist, with a special interest in the history and politics of archaeology, public interpretation and heritage policy, he was awarded a Crane-Rogers Fellowship (1984-7) and a 1991 Guggenheim Fellowship to study and write about the politics of the past in the modern Middle East. His books and edited volumes on Heritage, Archaeology, and their impact on contemporary society include: *The Future of Heritage* (2008); *Who Owns the Past?* (2007); *Memory and Identity* (2007); *Heritage, New Technologies, and Local Development* (2006); *Archaeology and Society in the 21st Century* (2001); *The Bible Unearthed* (2001); *Invisible America* (1995); *Between Past and Present* (1989); and *Digging for God and Country* (1982).

From 2004 to 2007, he served as director of the Ename Center for Public Archaeology and Heritage Presentation in Belgium. In 2008, he was appointed to the faculty of the Department of Anthropology of the University of Massachusetts Amherst and became one of the founders of its Center for Heritage and Society. He is editor-in-chief of the second edition of the *Oxford Companion to Archaeology*. He also serves as co-editor of the journal *Heritage & Society* and is a member of the editorial board of the *International Journal of Cultural Property*.

AIDS Memorial Quilt detail

The Cultural Work of Interactive Memorials: Lessons from the AIDS Memorial Quilt Digital Experience Project

'Epidemics, like wars, mark a generation for life'.

The AIDS Memorial Quilt was created 25 years ago as a work of community activism to protest the appalling lack of attention by the US health agencies to what was then, in 1987, an increase in improbable fatalities among previously healthy gay men in the United States. Its first inception unfolded in October 1987 on the National Mall in Washington DC as part of the March for Gay Rights; it included 1,920 Quilt panels. Now 25 years later, the Quilt encompasses more than 48,000 panels, representing 60 countries and commemorating more than 93,000 names. It is the largest living memorial of its kind in the world.

The Quilt is also an 'activist archive' of the late 20th century. The activities that gave rise to the Quilt in 1987 are part of the history of the campaign for gay and lesbian rights in the US. The Quilt literally stitches together a million memories, a million stories, a million lessons about the relationship between individual lives, public culture and political activism. In its textile form, it is an unwieldy archive. If laid out in its entirety the Quilt would cover more than 1.3 million square feet. It weighs more than 34 tons.

This presentation discusses the creation of an interactive memorial that was designed to augment the viewing of the textile Quilt. I will demonstrate three digital experiences: 1) an open-source mobile web application called AIDS QUILT TOUCH; 2) a tangible tabletop interactive that enables viewers to SEARCH the database of Quilt images to find a specific image and to BROWSE the archive of Quilt panel images; and 3) a community sourcing application that engages people in analyzing and archiving information about the Quilt.

This effort is framed by a transmedia book project called *Designing Culture: The Technological Imagination At Work*. In creating the Quilt Digital Experiences I was interested in exploring the cultural work of public interactives, to examine how they are implicated in practices of cultural reproduction — remembering, witnessing, archiving and educating.

Anne BALSAMO

Anne BALSAMO

Professor
The New School for Public Engagement
United States of America

Biography

In her recent book, *Designing Culture: The Technological Imagination at Work* (Duke, 2011), Anne Balsamo offers a manifesto for rethinking the role of culture in the process of technological innovation in the 20th century. Based on her experiences as an educator, new media designer, research scientist and entrepreneur, the book offers a series of lessons about the cultivation of the technological imagination and the cultural and ethical implications of emergent technologies. Dr. Balsamo was recently appointed the Dean of the School of Media Studies at the New School for Public Engagement in New York. Previously she was a full professor at the University of Southern California in the Annenberg School of Communication and the Interactive Media Division of the School of Cinematic Arts. From 2004-2007, she served as the Director of the Institute for Multimedia Literacy at USC where she created one of the first academic programs in multimedia literacy across the curriculum. In 2002, she co-founded Onomy Labs, Inc. a Silicon Valley technology design and fabrication company that builds cultural technologies. From 1999-2002, she was a member of RED (Research on Experimental Documents), a collaborative research-design group at Xerox PARC, who created experimental reading devices and new media genres. She served as project manager and new media designer for the development of RED's interactive museum exhibit, XFR: Experiments in the Future of Reading, that toured Science/Technology Museums in the U.S. from 2000-2003. Her earlier book, *Technologies of the Gendered Body: Reading Cyborg Women* (Duke UP, 1996) investigated the social and cultural implications of emergent bio-technologies.

Multimedia classics

空穴来风,未必无因

'If the wind comes from an empty cave, it's not without a reason'
Transparency and Credibility as Factors of Success in Hypermedia Design

This lecture provides an insight into my current research project, 'Multimedia Classics – Hypermedia Hermeneutics' which will be published in 2013. The interplay of dramaturgy, navigation, interaction design and user behavior, combined with his/her motivation and philosophical background, is relevant for the flow of the whole. But what are the factors of success in hypermedia design? After analyzing over 700 products of the years 1991-2012 the key factors of success are transparency and credibility on one side and a stimulating uncertainty on the other side. 'Transparency' is the visualized form of navigation through content. 'Credibility' as a symbol of authenticity shows our trust in science and its authority. And 'uncertainty' has been described by the French cinematographer Robert Bresson as 'a state of intense ignorance and curiosity'. Taken together, hypermedia creates a suspenseful curiosity-driven search for new knowledge. For the content provider hypermedia supports the user's quest to discover the new and unknown such as sensations, contexts or knowledge. To reach these aims, endless approaches of hypermedia design have been entered. In my lecture I will show a few of these masterpieces.

For more than twenty years, online and offline applications of hypermedia technology have combined text, image, video, animation and sound into a 'total work of art' (Gesamtkunstwerk). The multimedia hype of the 1990s is over. Since multimedia 'silver disc' classics tend to get lost, we must define criteria for analysis, preserve the wisdom of the multimedia pioneers and convey their secrets to our students. Without the main skills of multimedia — the strategies how to combine different media for knowledge transfer, the dramaturgies how to narrate stories, the ideas how to interact with the user, and ways in which to systematically structure different media in a hyperlinked area (for a good look and feel) — ICT design is unthinkable.

Harald KRAEMER

Harald KRAEMER

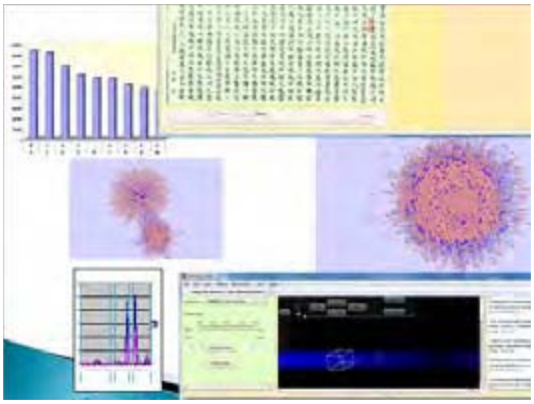

Zurich University of the Arts
Zurich, Switzerland

Biography

Harald Kraemer is a producer, information architect and creative director of online and offline hypermedia applications for museums and universities. His work includes productions such as Vienna Walk Demo (prototype of an interactive online film realized with Science Wonder Productions in 1998), Virtual Transfer Musée Suisse (interactive stories about 600 artefacts from the 8 Swiss National Museums in 5 languages), as well as Artcampus (the exemplary online learning course about the methodology of art history, developed for the Institute of Art History at the University of Berne).

Kraemer is also a passionate teacher. By analyzing products, systems and structures he develops his students' audiovisual perception, as well as their ability for creative and critical analysis. After teaching art history, media studies, design theory and practise at universities in Berne, Cologne, Constance and Luneburg, he has recently been named Docent at the Department for Design at Zurich University of the Arts and at the Department for Image Sciences at Danube University Krems. Kraemer has a PhD in Art History from the University Trier/Moselle and a MA in conceptual design for museums from the Viennese Institute for Cultural Studies. He has written and published widely on the subject of hypermedia, museum informatics, and digital collections, as well as contemporary art and knowledge transfer in/for museums. Currently he is working on Multimedia Classics – Hypermedia Hermeneutics, a critical oeuvre catalogue and a methodology of hypermedia.

Imaging Data: Computation, Analytics, Reverse Predictive Practices

The successful creation of large amounts of digital data has placed scholars in all fields, and the humanities, at a point where management issues have become crucial. It is no longer sufficient to provide search and retrieval capabilities that return thousands of examples. In order to achieve the best possible use of information, we must seek for the most efficient methods of communicating the presence and meanings of a wide range of analytic patterns. One necessary component of this presentation of explanatory analysis is image. The Electronic Cultural Atlas Initiative (ECAI) at the University of California, Berkeley has been exploring methods of accomplishing these strategies through the use of Geographic Information Systems (GIS) mapping of cultural features. As part of the context for the cultural maps, an added feature is the use of computation and analysis for large textual corpora such as canonic texts, archival documents and digital records of artifacts. Pattern searching is accomplished by changing natural language text into abstract images (blue dots) that display word occurrence and patterning by color changes. In addition, the software being developed provides the user with a number of different graphs, charts, time lines and comparative matches. A recent addition to the services offered by the Open Platform is predictive analysis, normally used to indicate future expectations, but now reversed so as to identify anomalous patterning found in past data sources. A new focus will be on how to collect annotations from scholars who create these data and analytics and with these statements bring into being a new type of publication that is tied to the digital, rather than codex format, or a copy of previously established methods of dissemination.

Lewis LANCASTER

Lewis LANCASTER

Director of the Electronic Cultural Atlas Initiative (ECAI), Distinguished Professor (Emeritus), University of California, Berkeley, United States of America

Biography

Professor Lewis Lancaster serves as the Director of the Electronic Cultural Atlas Initiative (ECAI) a research unit of the School of Information at the University of California, Berkeley. He is Distinguished Professor (Emeritus) of the Department of East Asian Languages and Culture. His work in the digital field has included the input of Sanskrit, Chinese, Pali and Tibetan Buddhist canonic texts. The research and development of software for imaging and analysis has been done with grants from the Luce Foundation, the National Science Foundation of the U.S., Hewlett Packard Inc., Samsung Inc. and the Coleman Fung Foundation. He is currently editing a new Cultural Atlas of Maritime Buddhism in partnership with the Archaeological Survey of India and National University of Singapore. Previous cultural atlases have included the Atlas of Chinese Religions, Atlas of Tibetan Buddhist Monasteries and Atlas of Iraq Cultural Sites. He serves as Adjunct Professor at the University of Hong Kong, Vietnam Buddhist University, Ho Chi Minh, and the University of the West, Los Angeles. International activities include joint projects with ALiVE at City University of Hong Kong, Pacific Neighborhood Consortium of Academia Sinica, Taiwan, and Fa Gu Buddhist College, Taiwan.

ECloud, Leuven, June 2012 © ALiVE, CityU

Europeana and the Future of the Archive

The Europeana Foundation was set up in 2008 for the purpose of fostering collaboration between the Museums, Libraries, Archives and Audiovisual Collections of Europe. This collaboration has resulted in a strong network of over 2200 partners from 33 countries, working together to make this collective heritage accessible in meaningful new ways. The results of this collaboration is a repository of over 24 million objects, which will be released under the Public Domain Mark (CC0) in September 2012. We believe that there is strong potential for re-usable digital culture to improve our educational systems, build new innovative businesses and to generally enrich lives. But making this a reality will require different kinds of partnerships, with the creative industry, educational publishers and designers. During this talk we will explore these new challenges by looking closely at a number of recent projects, including Open Labs, First World War crowdsourcing and *ECloud*, a 3D installation that was created in partnership with the Applied Laboratory for Interactive Visualization and Embodiment (ALiVE), CityU of Hong Kong.

Harry VERWAYEN

Harry VERWAYEN

Director of Business Development
Europeana
The Hague, Netherlands

Biography

Harry Verwayen is Director of Business Development at Europeana <http://www.europeana.eu>. His main focus is the design and implementation of new business models and strategies that will support Europeana to fulfill its mission as a driver of innovation in the cultural heritage sector. Prior to this position, Harry worked at the Amsterdam based think tank Knowledgeland <http://www.knowledgeland.org> where he was responsible for innovation and positioning of the project Images for the Future <http://imagesforthefuture.com/en/>. He has over ten years of experience in the Academic Publishing industry in various positions including sales, business and product development. He has worked for Kluwer Academic Publishing, Springer and IDC. Harry holds a MA in History from Leiden University and a certificate from Nyenrode Business University.

Recent article: 'The Problem of the Yellow Milkmaid, a Business Model Perspective on Open Metadata', Verwayen, Arnoldus, Kaufman 2011 <http://www.scribd.com/doc/73652620/Europeana-White-Paper-2>.

V-MUST.net at Archeovirtual

Virtual Museums in the 21st Century – Present Challenges and Future Prospects

The term ‘virtual museum’ has become as ubiquitous as to render it almost redundant. While for most the term ‘museum’ is synonymous with a ‘house of collections’, a ‘virtual museum’ is still pretty nebulous. Many associate a physical museum as a location of art — (paintings or sculptures) — having a vague notion of their multi-functions of curatorship, preservation, education, etc. Fewer still have heard about museology or museography and probably won’t be aware that museums are engaged in research and pedagogy. Based on this lack of clarity, if we were to ask someone to describe a ‘virtual museum’ they would probably associate the generic idea of ‘museum’ with the term ‘virtual’, coming up with an ‘almost museum’, an ‘imaginary museum’, or a ‘computer generated museum’.

2011 saw the launch of an ambitious, four-year research project, V-Must (www.v-must.net), funded by the European Commission. V-Must aims to formalize the term ‘virtual museum’ by setting up the theoretical platform upon which to build the conceptual framework for virtual museums. Taking on a broad, focused agenda, the project embraces disciplines that include innovative digital technologies, educational and pedagogical aspects, as well as the socio-economic aspects of virtual museums.

The V-Must agenda is ambitious; coming to grips with the imprecision of the ’virtual museum’ in academia and the public mind, it examines how the virtual museum amplifies and interfaces with the physical museum. V-Must identifies categories of virtual museums, and sets out their multi-faceted characteristics. It describes the narratives being spun and the ways in which specific topics are targeted to specific audiences across various media. The project identifies digital technologies implemented in virtual museums through presenting a range of case studies and outlining best practice in the cultural heritage sector.

Practical implications of the virtual museum focus on digital infrastructures for the creation, archiving and re-use of digital content related to virtual museums; the definition of sustainability models for virtual museums (e.g., overcoming technological dependence); and the enhancement of visitor experience in terms of edutainment — entertainment and education.

Susan HAZAN

Sorin HERMON

Susan HAZAN

Curator of New Media and Head of the Internet Office at the Israel Museum, Jerusalem, Israel

Biography

Dr. Susan Hazan is Curator of New Media and Head of the Internet Office at the Israel Museum, Jerusalem, identifying and implementing electronic architectures for the gallery, and outreach programs including the recent Digital Dead Sea Scrolls project at the Israel Museum which received over one million unique users when it was launched September 2011. Her Masters and PhD research at Goldsmiths College, University of London in Media and Communications focused on electronic architectures in the contemporary museum. Hazan is currently investigating the virtual museum (V-Must), social networks and crowdsourcing in the cultural heritage sector, and innovative platforms for disseminating virtual museums and digital libraries. In (2002/2004) was visiting lecturer at the University of London teaching Web Design, Critical E-Museology, and Digital Media with an emphasis on the correlation between cultural theory and contemporary practice, annual lecturer in the Museology Department at Haifa University, Israel and guest lecturer on the Intelligent Heritage Course at City University, Hong Kong (2010/2011). Hazan is the Israel Coordinator the World Summit Award (WSA) and Co-Chair of the Annual Jerusalem Conference on the Digitisation of Cultural Heritage (2004-2012). Hazan sits on numerous program committees: Museums and the Web 2001-2012, Virtual Systems and MultiMedia Conferences to Europe (VSMM2005/2009, 2012), PATCH 2012, Workshop on Personalized Access to Cultural Heritage, High-Tech Heritage 2012, UMass Amherst Campus, Amherst, MA USA. Hazan acts as Reviewer to Discovery Projects, Australian Research Council (ARC) and is on the editorial board, for Uncommon Culture, ATHENA New Media Consortium (2010, 2011), Horizon Report: Museum Edition Advisory Board Il capitale culturale: Studies on the value of cultural heritage. Publication list <http://www.musesphere.com/about/Susan.Hazan.html>.

Sorin HERMON

Science and Technology for Archaeological Research Center, The Cyprus Institute, Cyprus

Biography

Sorin Hermon received his MA in Prehistory from the institute of Archaeology, the Hebrew University in Jerusalem, Israel in 1996, and his PhD from the Ben-Gurion University of the Negev, Israel in 2003, title thesis: 'Socio-economic aspects of Chalcolithic societies in Southern Levant', published in 2008. Between 2002 and 2005 he had post-doctoral research training in 3D scientific visualization for cultural heritage research and knowledge representation at PIN, University of Florence, Italy, where later on he became principal researcher. Since 2008, Sorin Hermon has worked at the Science and Technology for Archaeological Research Center of The Cyprus Institute, where he holds a tenure track position of assistant professor in digital cultural heritage. He has published two books, is co-editor or contributed chapters into several other peer-reviewed scientific books and is co-author of more than 30 peer-reviewed scientific articles. Sorin Hermon is the principal investigator for several EC funded research initiatives in the field of virtual museums, 3D documentation, semantic knowledge representation and digital technologies for cultural heritage.

Poetic Interpretation of Asian Art: Using New Media for Storytelling and Experimentation

Love it or hate it, new media presentations have become an important element of the museum experience or experiment. Museum professionals realize that in order to reach contemporary audiences they must communicate in ways that they understand. To remain relevant to contemporary society, museums must attract and maintain an active and interested audience — an audience who is primarily accustomed to being entertained and educated through the latest technology. In light of this, many museums in Asia today have incorporated new media interpretation into their programs and exhibits — and they continue to do so, despite the growing popularity, and proliferation, of social networking Web sites.

This presentation will showcase several recent new media installations in Asian museums using immersive and interactive new media for storytelling and experimentation. Through multiple large screen projections, on-site specific theatrical and motion detective installations, these new media displays were produced to interpret, enhance and promote exhibit themes and goals. These installations are no longer a digital reproduction of the artwork but use new media as a tool to create an exquisite environment so visitors can 'walk into' a century old Chinese scroll, hearing a fisherman's echo through a cloud covered mountain valley, catching a summer breeze from a lotus pond, or having a 3D animated butterfly or a cricket land on your palm.

Using new media as a storytelling tool adds a poetic touch through multiple sensory modalities. This has revolutionized the traditional academic approach of understanding Asian art. This session hopes not only to showcase an array of the best practices in Asia, but also to discuss current trends of using new media for interpretation and new perspectives of using technology in the context of museum education.

Herminia DIN

Herminia DIN

Associate Professor of Art Education
University of Alaska Anchorage

Biography

Dr. Din is an associate professor of art education at the University of Alaska Anchorage. She was the Web producer at the Children's Museum of Indianapolis and education technologist at the Indianapolis Museum of Art. In 2005, she partnered with the University of Alaska Museum of the North in Fairbanks on the LearnAlaska project, and facilitated a docent-training program using Internet2 videoconferencing for a distance-delivered program. She presented at SIGGRAPH Educator's Program on educational gaming for museums, and delivered a speech on using animation and interactive virtual technology to enhance museum learning at SIGGRAPH ASIA 2008. She collaborated with colleagues at the Metropolitan Museum of Art, American Museum of Natural History, California Academy of Sciences, and de Young Fine Art Museum to offer teacher development programs focusing on art and science integration. In 2007, she co-edited *The Digital Museum: A Think Guide* that offers an in-depth investigation into how and why museums are experimenting with new technology, and co-authored *Unbound by Place or Time: Museums and Online Learning* (2009) and *All Together Now: Museums and Online Collaborative Learning* (2011). Her research focuses on object-based learning and evaluation of the effectiveness of museum online resources. She addresses the transformation of teaching and learning by using new technologies, and aspects of emerging technology for implementing creative initiatives to enhance museum education. She holds a doctorate in art education from Ohio State University and presents regularly on museum and technology at national and international conferences.

WILD, Museum Victoria

Collaboration, Innovation and the Future of Museums

Museum Victoria is Australia's largest public museum organisation, incorporating Melbourne Museum, Scienceworks, the Immigration Museum and the World Heritage-listed Royal Exhibition Building. In 2009–10, 2.1 million people visited the museums and the website attracted more than 8.6 million views.

Museum Victoria is responsible for the State collection of more than 16 million items, which form an invaluable record of Victoria's environmental and cultural history. Researchers, many of whom are world experts in their field, work in the areas of natural sciences, history and technology, Indigenous cultures and museology. This research adds to the communities' understanding of critical contemporary issues such as reconciliation, biodiversity, climate change and cultural diversity.

The world's largest and oldest museums have all been operating for over 150 years and it is important to see museums in the context of the thinking and acting with long-term aims and ambitions. Over the past 150 years there has been massive technological change (steam to nuclear, walking to flight, flags to mobiles, etc.) none at a faster pace than the changes that the digital age has introduced. The effects of this change cover, as they do in our everyday lives, all areas of museum operations. Running the 'core' technologies that allow a 'modern' museum to operate effectively are a big challenge — there are never the resources you need to maintain pace with the ever increasing demands of change, but it's always better to be leading the change.

Museum Victoria will be used to outline how large multi-campus museums are run — and what separate departments and divisions are needed to effectively manage day to day operations, develop new exhibitions, manage collections, operate cafes and shops, car parks and run the buildings, etc. It's a complex business with a lot going on behind the scenes.

This presentation will focus on technology — how we do what we do with examples of our work in exhibitions and online and, the systems that underlie the multimedia we use in our exhibitions. The paper will briefly discuss our management models and explain what we do differently — what works and what doesn't.

Tim HART

Tim HART

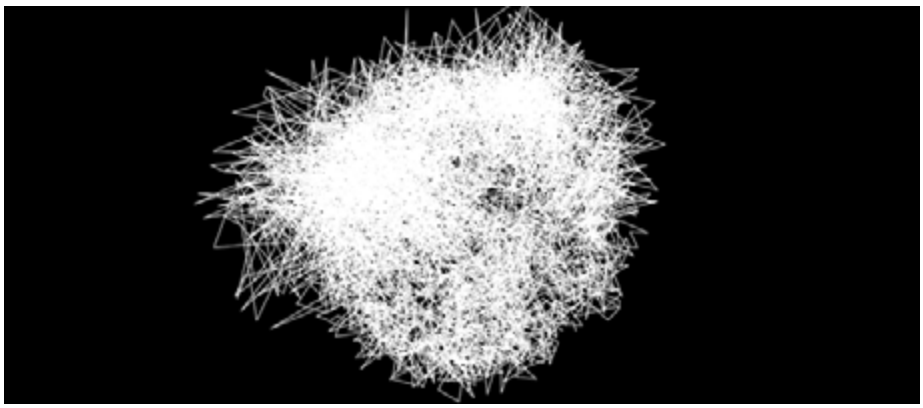

Director
Public Engagement
Museum Victoria, Melbourne

Biography

Tim Hart is responsible for creating a visitor experience that is engaging, interesting and continues to expand audiences through digital technology and the provision of reliable, world-class business information management systems. He is also responsible for the implementation and management of Information Technology systems throughout Museum Victoria.

The Public Engagement Division is responsible for leading The Museums' engagement online, onsite and offsite. Visitors to Melbourne Museum, Bunjilaka, Scienceworks the Immigration Museum and Royal Exhibition Building, along with education and community programs, are supported through the provision of multichannel online resources. This is achieved in collaboration with staff from across Museum Victoria.

The Division provides leadership in the effective use of information technology to support the organisation to negotiate the rapidly changing external environment. As the State Museum of Victoria, there is a responsibility for community and outreach programs that engage the broadest possible audience.

I Sho U

Introspection by Interaction: Visualizing the Visitor Experience in the Digital Container

The focus of this presentation is on the contribution of visitors felt in response to the theorization and design of the semi-immersive interactive exhibition environment known as the digital container. The analysis of a participant's emotion and co-experience in the digital container aims to contribute to an emerging syntax of digital space and interaction design that predominantly focuses on the technologies of form and content and undertheorizes the pivotal point of the container; namely, the experience of the visitor. As feelings and experiences are abstract and inaccessible to objective scrutiny, it is difficult to describe the exactness of the experience. Equally, measurements of such responses are difficult. Aitkin notes the limitation of the use of language for the measurement of feelings. Despite this difficulty, Mark Johnson's proposition that we understand the world because we have a body argues that metaphor is key to our understanding of perception, imagination and thought. Johnson's 'image-schemes'; abstract representations of process, thinking and visualisation inform the design semiotics and interaction of an experimental artifact used to ascertain a visitor's experience of the digital container profiled in this presentation. The prototype artifact, titled the I Sho U, invites introspection through visitor engagement. The artifact is mediated by interaction and aesthetics. This type of visual analysis is atypical of traditional visitor studies or cognitive measurement, provides a pulse for stakeholders interested in visitor response and is an alternative in the quest for quantification of qualitative abstract states of emotion in a digital space.

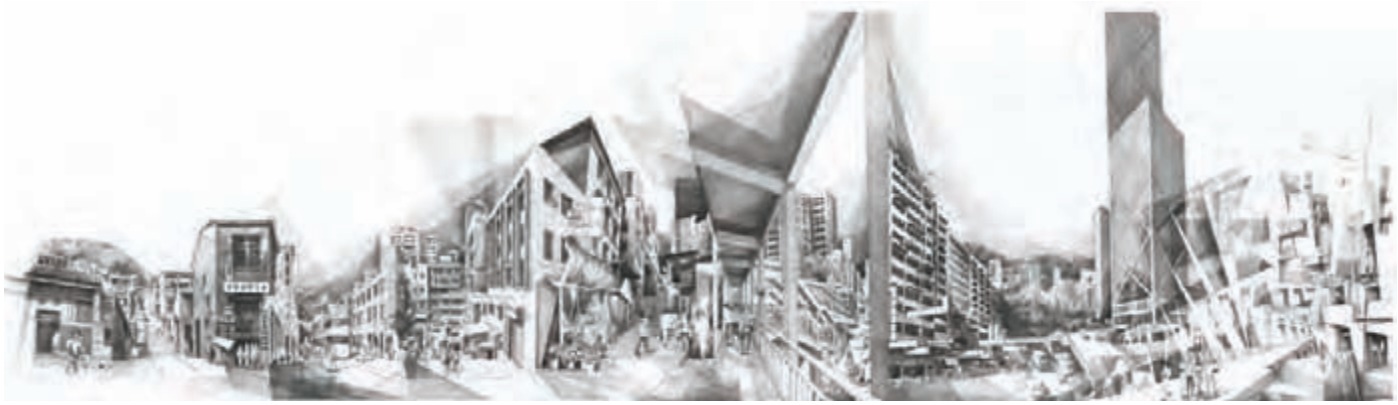

Anita KOCSIS

Anita KOCSIS

Head of Design, Society and Culture in the Faculty of Design, Swinburne University of Technology, Melbourne, Australia

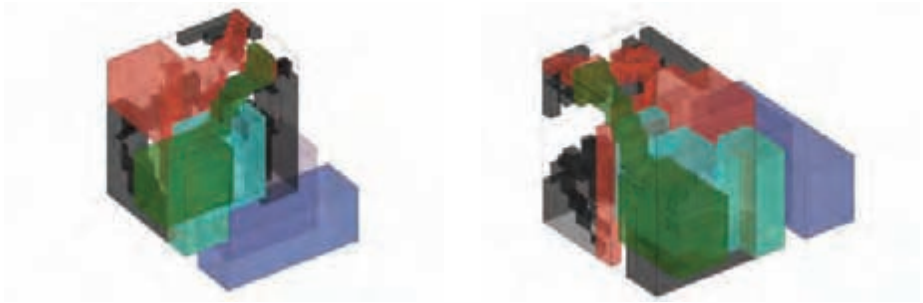

Biography

Dr. Anita Kocsis is Head of Design, Society and Culture in the Faculty of Design, Swinburne University of Technology in Melbourne, Australia. Anita's creative, commercial and academic achievement spans a design and technology nexus evidenced by intermedia exhibitions in public and private institutions. Anita's PhD at the i-Cinema Centre for Interactive Cinema Research, University of New South Wales, titled 'Co-Designing New Media Spaces', positioned the phenomenon of the visitor experience as a design strategy for mediating between repertoires of practice in interdisciplinary new media exhibitions. Anita's articulation across research and teaching focuses on how design can facilitate the multilateral process of meaning construction that unfolds between content providers, designers and audiences. Her work in the neuroaffective research cluster of the faculty focuses on the phenomenon of visitor feelings in interactive and immersive experiences for museums, galleries and the digital humanities. She is experimenting with interactive design systems for visualizing the pulse of the visitor experience which can be used by stakeholders of human-centred virtual system design and emergent stereoscopic and panoramic immersive architectures.

Heritage in Full 3D and Beyond: Urban Heritage in the Making

The heritage of Hong Kong can be seen by walking its streets and traversing its buildings. The manner in which urban space is manufactured and used can be traced to the southern Chinese tradition of the shop house. These traditions can be seen in the urban fabric today and are captured in the design of future urban conditions. In this talk, we will explore the development of volumetric urban places and explore the capturing of urban heritage through digital techniques of design process. In this context of architecture and urban design, we are exploring the use of digital heritage as a process rather than an outcome.

Justyna KARAKIEWICZ

Tom KVAN

Justyna KARAKIEWICZ

Dean of the Faculty of Architecture, Building, Planning and Assistant Vice Chancellor (Campus Development), University of Melbourne

Biography

Dr. Justyna Karakiewicz is Associate Professor of Urban Design and coordinator of the Master of Urban Design at the University of Melbourne. Justyna is co-author of *The Making of Hong Kong*, which examines the volumetric city as a sustainable urban form. Justyna was educated in architecture in London at Westminster University and the Architectural Association. Justyna has taught as a full-time tutor of the AA, the Bartlett School of Architecture of University College. The practice she established in 1984, PCKO, was recently recognised for its work in sustainability over the past 25 years. Her research interests lie primarily in high-density urbanism in which she completed her doctoral thesis. She has exhibited work in Royal Academy (London), New York, Kyoto, Barcelona and some twenty other venues. Her research is conducted in part through design with numerous successes in international competitions, several of which have resulted in built works.

Tom KVAN

Dean of the Faculty of Architecture, Building, Planning and Assistant Vice Chancellor (Campus Development), University of Melbourne

Biography

Tom Kvan is Dean of the Faculty of Architecture, Building and Planning and Assistant Vice Chancellor (Campus Development) at the University of Melbourne. Tom is co-author of *The Making of Hong Kong*, which examines the volumetric city as a sustainable urban form. Tom has worked at the Universities of Melbourne, Hong Kong and Sydney over the past 16 years and authored over 130 publications on design and design management. Among his other appointments, he is currently founding Director of LEaRN, the Learning Environments Applied Research Network, and founding Director of AURIN, the Australian Urban Research Information Network, hosted at the University of Melbourne. Tom has practiced architecture in Africa, Europe, Hong Kong and the USA in practices small to large, was director of software development in an IT start-up in California and has been a management consultant to architects and engineers.
